THE PHYSICIAN WORKFORCE IN TEXAS

An Examination of Physician Distribution, Access, Demographics, Affiliations, and Practice Patterns in Texas' 254 Counties

INTRODUCTION

What is the state of physician distribution and access in Texas' 254 counties? How are physician practice patterns, demographics, affiliations, employment status, electronic health record (EHR) implementation, Medicare and Medicaid acceptance rates and other practice characteristics and metrics evolving in the state, and how will these changes affect patient access to care?

Merritt Hawkins, a national physician search and consulting firm and a company of AMN Healthcare (NYSE: AHS), was commissioned by the North Texas Regional Extension Center (NTREC) to complete a physician demographic study examining these and related questions. This report and its Appendices and accompanying Excel sheet data sets delineate our findings and analysis.

About North Texas Regional Extension Center and DFW Hospital Council Foundation

A program of the DFW Hospital Council (DFWHC) Foundation (www.dfwhcfoundation.org), the North Texas Regional Extension Center (NTREC) assists physicians in 42 counties in implementing Electronic Health Records. NTREC was funded by a 2010 grant from the U.S. Department of Health and Human Services, Office of the National Coordinator for Health Information Technology. The DFWHC Foundation is a non-profit 501(c)(3) organization with a mission to continually improve the community's health by promoting high quality and cost effective healthcare.

About Merritt Hawkins

Established in 1987, Merritt Hawkins is the largest physician search and consulting organization in the United States, working with hundreds of hospitals and other healthcare facilities each year nationwide. Merritt Hawkins also conducts internal research for the benefit of its clients and external research on behalf of third parties interested in physician demographics, physician practice patterns, community needs assessment, and related topics. Merritt Hawkins has conducted external research for a variety of organizations, including The Physicians Foundation, a non-profit group of over 20 state medical societies, the Indian Health Service, Trinity University's Department of Health Care Administration, the Association of Academic Surgical Administrators, and a variety of hospitals and hospital systems.

A "State of the Union"

The purpose of this study is to gain a better understanding of the current disposition of physicians in Texas - where they are located, in which specialties they practice, whether they are employed or are independent, whether they are affiliated with larger entities, what types of patients they see, their morale levels, practice patterns, future practice plans and other characteristics likely to affect access to quality patient care in the state. The intent is to present a "state of the union" of the medical profession in Texas that NTREC may use to evaluate the state's total physician workforce in the context of its mission to ensure the meaningful use of information technology in support of physician practices and thereby enhance patient access to physician services.

A Range of Data

Following in this report are data collected on the 254-county area of Texas obtained through various public and proprietary sources as collected and evaluated by Merritt Hawkins. This data include physicians by name, specialty, NPI ID, group practice name or affiliation, employment status, Medicare and Medicaid acceptance rates, Meaningful Use payments, and related metrics.

The service area examined in this report includes 254 Texas counties depicted in the map below:

In the following sections of this report, Merritt Hawkins will quantify the number and distribution of physicians in Texas and compare them to national averages. We will examine the physician workforce in the state by age, gender and practice patterns and project how these factors may affect physician availability. Merritt Hawkins also will examine Medicare and Medicaid rates of acceptance in the 254-county area to determine potential access to physicians among patients covered by these government programs.

Merritt Hawkins will further examine the disposition of physicians in Texas, providing an estimate of the percent that are employed by or affiliated with various entities and the percent that remain independent.

The goal will be to provide both fresh and accessible data reflecting provider numbers and affiliations of physicians in the state, and an analysis of how these numbers may affect accessibility to care and the potential need for additional providers. Accompanying this report is an electronic spread sheet listing the majority of physicians in Texas by various fields, including name, specialty, practice status and others.

KEY FINDINGS

The study reveals a variety of characteristics about the physician workforce in Texas of particular note, including:

- Approximately 63,000 licensed physicians reside in Texas. Of these, 46,953 are in active patient care and this is considered the net physician workforce in the state in this report. They serve a population of 26,448,193 Texas residents.
- Texas ranks 41st among the 50 states in active patient care physicians per 100,000 population.
- It would require 12,819 additional physicians to bring Texas in line with the national average of physicians per 100,000 population.
- Texas ranks 47th in the nation in active primary care physicians (PCPs) per 100,000 population.
- 35 Texas counties have no physicians of any kind.
- 80 Texas counties have five or fewer physicians.
- 147 Texas counties have no obstetrician/gynecologist.
- 185 Texas counties have no general psychiatrist.
- 158 Texas counties have no general surgeon.
- The physician workforce in Texas is disproportionately located in the five most populous counties in the state (Harris, Dallas, Tarrant, Bexar, Travis). 26,620 physicians (57% of the total workforce) practice in these counties, though only 44% of the state's population resides in these counties.
- Smaller counties of 40,000 people or less are home to 2,264,257 Texans (8.6% of the state's population), but only 1,170 physicians (2.5% of the total workforce) practice in these counties.
- There is a ratio of only 52 physicians per 100,000 population in counties of 40,000 people or less in Texas, compared to 228 per 100,000 for the five most populous counties and 183 per 100,000 for the entire state.
- Though it has a relatively low ratio of physicians per population, Texas is one of the few states where growth in the physician workforce is matching or exceeding growth in the general population. Since the passage of tort reform in 2003, Texas has licensed an average of 3,200 new physicians a year.
- Emerging practice patterns and practice choices among Texas physicians are likely to erode access to physician services in the state, as 45% of Texas physicians plan to accelerate their retirement plans, 19% plan to cut back on hours, 9% plan to switch to concierge practice, and 6.4% plan to work part-time.
- Texas physicians have little capacity to take on extra work or see more patients. Over 78% of Texas physicians indicate they now are at full capacity or are overworked and overextended.
- A relatively high number of Texas physicians remain in independent practice, but a growing number are employed or are affiliated with larger entities. Between 45% and 49% of Texas physicians are independent practice owners, compared to approximately 35% nationally.
- Texas has the highest number of physicians in solo practice (29%) of any state.
- Medicare and Medicaid acceptance rates are relatively low among Texas physicians. 35% do not accept Medicaid and 20% do not accept Medicare, compared to 18% and 13% of physicians nationally.
- Texas ranks 43rd in number of physicians participating in the state insurance exchanges established by the Affordable Care Act (ACA).
- Texas ranks 39th in number of physicians participating in Accountable Care Organizations (ACOs).
- The professional morale of Texas physicians is relatively low, 46th out of 50 states, a fact that has significant implications for healthcare access and quality.

As these and other data show, the physician workforce in Texas is characterized by a deep divide between rural, low population density areas, where physician access can be minimal to non-existent, and urban/ suburban, high population density areas, where physician access can be comparatively more robust. However, even within more populous regions, there are areas where physician-to-population ratios are low and physician access can be problematic.

In addition, the physician workforce in Texas is in transition, maintaining a comparatively large number of independent doctors, but moving toward the employed and affiliated practice models. This unsettled status has led to a paradox – a rapidly growing physician workforce with doctors being attracted to the state, yet one where morale is low and where a significant number of physicians indicate they plan to alter their practice styles in ways that may affect access to services in the state. These evolving physician practice patterns, including rates of Medicare and Medicaid acceptance, as well as changing physician demographics, will further limit access to physicians in Texas, where physician-to-population ratios already are low relative to national averages. These trends are examined in more detail below.

PHYSICIANS BY COUNTY

The physician workforce in Texas is comprised of 46,953 doctors in active patient care, as tracked by the American Medical Association’s Physician Master File, the most comprehensive data source of physician numbers and distribution in the industry. The numbers in the chart below are taken from this data set.

Merritt Hawkins also uses a robust subset of this number (39,200 physicians) for which detailed data is available through the AMA Master File and SK&A, one of the leading healthcare database companies in the United States, to track information on the employment status of doctors, practice affiliations, Meaningful Use, NPI ID, and related data and metrics. An Excel spread sheet tracking this data is included with this report.

Physicians in Texas represent approximately 6% of the 750,000 physicians in active patient care in the United States, while the Texas population of 26,299,463 represents 8.4% of the United States’ total population of 316 million (*AMA Physician Master File/U.S Census Bureau*). By 2019, the population in Texas is projected to grow by 11% to 29,094,644, if recent population growth patterns remain consistent. The chart below lists Texas’ current population per its 254 counties, its projected population to 2019, and its current physician population by county:

Texas Service Area by Population, Projected Population and Current Active Physician Population

SEVERE SHORTAGE AREAS AND SPECIALTIES

An examination of these numbers indicates that Texas, a large and demographically varied state, has a pronounced shortage of physicians in particular counties and in certain medical specialties, as well as fewer physicians per capita overall than the national average. Some counties have no physician of any kind, many have very few physicians, and an inordinate number have no physicians in certain key specialties.

Counties Without a Physician:

There are 35 counties in Texas without an active patient care physician. These counties include:

Armstrong	Concho	Edwards	Irion	Kinney	Menard	Shackelford
Borden	Cottle	Foard	Jim Hogg	Lipscomb	Mills	Sherman
Brooks	Crockett	Garza	Kenedy	Live Oak	Motley	Sterling
Carson	Dallam	Glasscock	Kent	Loving	Real	Terrell
Cochran	Duval	Hudspeth	King	McMullen	Roberts	Wheeler

Source: American Medical Association Physician Master File/MMS 2014

Below is a breakdown of the total population in these counties.

Population of Texas Counties With No Physician

Total	Average	High	Low
115,826	3,309	11,867	95

It is to be expected that some counties in Texas will lack a physician, given that population levels in these counties may be too low to support a doctor.

Below are suggested physician-to-population ratios as determined by Richard A. Cooper, M.D., a nationally known physician supply and utilization expert at the University of Pennsylvania/Wharton School and Director of the Center for the Future of the Healthcare Workforce at the New York Institute of Technology. These are demand-based ratios that suggest the number of physicians that can be economically supported by a given population. Calculated in 2013, they are the most recent such ratios of which Merritt Hawkins is aware; they are also the most “real world” ratios applicable, as they indicate not how many physicians a population may theoretically need, but how many it can sustain given economic and demographic considerations.

Number of Physicians That Can be Supported per 100,000 Population

Family Medicine	31.0
Internal Medicine	29.6
Pediatrics	16.1
Cardiology	7.1
General Surgery	10.7
Obstetrics/Gynecology	13.0
Orthopedic Surgery	7.9
Psychiatry	14.7

Population Needed to Support One Physician by Specialty

Family Medicine	3,100
Internal Medicine	3,378

Pediatrics	6,250
Cardiology	14,084
General Surgery	9,346
Obstetrics/Gynecology	7,692
Orthopedic Surgery	12,658
Psychiatry	6,802

Source: Richard A. Cooper, M.D./University of Pennsylvania/Wharton School

As these numbers show, a county, community, or other medical service area requires slightly in excess of 3,000 people to support a single family physician or a general internist based on a national economic model. An analysis would need to be made of each county or service area to obtain a more exact number based on local economic, demographic and related conditions. However, 18 of 35 Texas counties with no physician currently have a population of 3,000 or more, and therefore may have the potential to support one or more primary care physicians.

Counties With One to Five Physicians:

There are 80 counties in Texas with one to five active patient care physicians. These counties include:

1	Briscoe	1	Rains	2	Trinity	4	Franklin
1	Coke	1	Reagan	2	Yoakum	4	Frio
1	Collingsworth	1	Refugio	2	Zavala	4	Hemphill
1	Crane	1	San Saba	3	Bailey	4	Lamb
1	Culberson	1	Schleicher	3	Baylor	4	Lynn
1	Delta	1	Stonewall	3	Castro	4	Mcculloch
1	Dickens	1	Upton	3	Clay	4	Milam
1	Donley	1	Ward	3	Jack	4	Sutton
1	Goliad	1	Winkler	3	Leon	4	Waller
1	Hall	2	Crosby	3	Ochiltree	5	Callahan
1	Hansford	2	Fisher	3	Parmer	5	Camp
1	Haskell	2	Jackson	3	Red River	5	Chambers
1	Jeff Davis	2	Kimble	3	Sabine	5	Hardeman
1	Knox	2	Madison	3	San Augustine	5	Hartley
1	La Salle	2	Mitchell	3	San Jacinto	5	Karnes
1	Marion	2	Morris	3	Stephens	5	Reeves
1	Martin	2	Presidio	4	Coleman	5	Scurry
1	Mason	2	Robertson	4	Dawson	5	Shelby
1	Newton	2	Swisher	4	Dimmit	5	Tyler
1	Oldham	2	Throckmorton	4	Floyd	5	Zapata

Source: American Medical Association Physician Master File/MMS 2014

Below is a breakdown of the population of these counties:

Population of Texas Counties With One to Five Physicians

Total	Average	High	Low
782,790	9,785	45,213	1,432
Total Physicians		Physicians per 100,000	
202		26	

These low-physician counties have a combined ratio of 26 physicians per 100,000 population compared to the national ratio of approximately 226 per 100,000 population and compared to the Texas ratio of approximately 183 per 100,000. Though these counties have at least one active patient care physician, as a group, and, most likely, individually, they can be considered severely underserved.

Counties Without an Obstetrician

There are 147 counties in Texas that do not have an active patient care obstetrician. These counties include:

Aransas	Clay	Duval	Haskell	Lamb	Mills	San Augustine	Tyler
Archer	Cochran	Eastland	Hemphill	Lampasas	Mitchell	San Jacinto	Upshur
Armstrong	Coke	Edwards	Houston	Lavaca	Montague	San Patricio	Upton
Austin	Coleman	Fannin	Hudspeth	Lee	Morris	San Saba	Uvalde
Bailey	Collingsworth	Fisher	Irion	Leon	Motley	Schleicher	Van Zandt
Bandera	Comanche	Floyd	Jack	Limestone	Ochiltree	Scurry	Waller
Baylor	Concho	Foard	Jackson	Lipscomb	Oldham	Shackelford	Ward
Borden	Coryell	Franklin	Jasper	Live Oak	Parmer	Sherman	Wheeler
Bosque	Cottle	Freestone	Jeff Davis	Loving	Pecos	Somervell	Wilbarger
Brooks	Crane	Garza	Jim Hogg	Lynn	Presidio	Starr	Willacy
Burleson	Crockett	Glasscock	Jones	Madison	Rains	Stephens	Wilson
Caldwell	Crosby	Goliad	Karnes	Marion	Reagan	Sterling	Winkler
Callahan	Culberson	Gray	Kenedy	Martin	Real	Stonewall	Wood
Camp	Dallam	Grimes	Kent	Mason	Red River	Sutton	Zavala
Carson	Deaf Smith	Hall	Kimble	McCulloch	Refugio	Swisher	
Cass	Delta	Hamilton	King	McMullen	Roberts	Terrell	
Castro	DeWitt	Hansford	Kinney	Medina	Robertson	Terry	
Chambers	Dickens	Hardeman	Knox	Menard	Runnels	Throckmorton	
Childress	Donley	Hardin	La Salle	Milam	Sabine	Trinity	

Source: American Medical Association Physician Master File/MMS 2014

Below is a breakdown of the population of these counties.

Population of Texas Counties With No Active Patient Care Obstetrician

Total	Average	High	Low
1,940,722	13,202	76,192	95

The total population of counties in Texas without an obstetrician (1,904,722) is roughly equal to or larger than the population of 14 individual states, including Wyoming, Vermont, North Dakota, South Dakota, Alaska, Delaware, Montana, Rhode Island, New Hampshire, Maine, Hawaii, Idaho, Nebraska, West Virginia as well as the District of Columbia.

Some of these counties do not have the population level necessary to support an obstetrical practice, about 7,700 people or above, per Dr. Cooper. However, 78 of the 147 Texas counties without an obstetrician currently do have a population of this size or greater and potentially could support one or more obstetricians.

Texas Counties With No General Psychiatrist

There are 185 counties in Texas with no general psychiatrist. These counties include:

Andrews	Childress	Duval	Hardin	Kleberg	Mitchell	Runnels	Upshur
Aransas	Clay	Eastland	Hartley	Knox	Montague	Rusk	Upton
Armstrong	Cochran	Edwards	Haskell	La Salle	Moore	Sabine	Uvalde
Atascosa	Coke	Ellis	Hemphill	Lamb	Morris	San Augustine	Waller
Austin	Coleman	Fannin	Hill	Lee	Motley	San Jacinto	Ward
Bailey	Collingsworth	Fayette	Hockley	Leon	Nacogdoches	San Patricio	Washington
Baylor	Colorado	Fisher	Hopkins	Liberty	Navarro	San Saba	Wharton
Bee	Comanche	Floyd	Houston	Lipscomb	Newton	Schleicher	Wheeler
Blanco	Concho	Foard	Hudspeth	Live Oak	Ochiltree	Scurry	Willacy
Borden	Cooke	Franklin	Hutchinson	Llano	Oldham	Shackelford	Wilson
Bosque	Coryell	Freestone	Irion	Loving	Orange	Shelby	Winkler
Briscoe	Cottle	Frio	Jack	Lynn	Palo Pinto	Sherman	Wise
Brooks	Crane	Gaines	Jackson	Madison	Panola	Somervell	Wood
Brown	Crockett	Garza	Jasper	Marion	Parmer	Starr	Yoakum
Burleson	Crosby	Glasscock	Jeff Davis	Martin	Pecos	Stephens	Young
Burnet	Culberson	Goliad	Jim Hogg	Mason	Presidio	Sterling	Zapata
Caldwell	Dallam	Gonzales	Jim Wells	Matagorda	Rains	Stonewall	Zavala
Calhoun	Dawson	Gray	Jones	Maverick	Reagan	Sutton	
Callahan	Deaf Smith	Grimes	Karnes	McCulloch	Real	Swisher	
Camp	Delta	Hale	Kenedy	McMullen	Red River	Terrell	
Carson	DeWitt	Hall	Kent	Medina	Reeves	Terry	
Cass	Dickens	Hamilton	Kimble	Menard	Refugio	Throckmorton	
Castro	Dimmit	Hansford	King	Milam	Roberts	Trinity	
Chambers	Donley	Hardeman	Kinney	Mills	Robertson	Tyler	

Source: American Medical Association Physician Master File/MMS 2014

Below is a breakout of the population of these counties.

Population of Texas Counties With No General Psychiatrist

Total	Average	High	Low
3,274,774	17,702	155,976	95

The combined population of Texas counties now without a general psychiatrist (3,274,774) is roughly equal to or larger than that of 21 individual states, including Wyoming, Vermont, North Dakota, Alaska, South Dakota, Delaware, Montana, Rhode Island, New Hampshire, Maine, Hawaii, Idaho, West Virginia, Nebraska, New Mexico, Nevada, Kansas, Utah, Arkansas, Mississippi, Iowa, as well as the District of Columbia. Texas has the fourth lowest number of psychiatrists per 100,000 population in the United States (4.1 per 100,000). Only Nevada, Mississippi, and Idaho have fewer psychiatrists per capita (*Source: AMA Physician Master File*).

Again, some of these counties do not have the population level required to support a psychiatric practice (6,800 people or more). However, 122 of the 185 Texas counties without a general psychiatrist currently do have a population of this size or greater and potentially could support one or more general psychiatrists.

Texas Counties With No General Surgeon

There are 158 counties in Texas with no general surgeon. These include:

Aransas	Cass	Delta	Gonzales	Kent	Mason	Real	Stonewall
Archer	Castro	Dewitt	Grimes	Kimble	Mcculloch	Red River	Sutton
Armstrong	Chambers	Dickens	Hall	King	McMullen	Reeves	Swisher
Austin	Cherokee	Dimmit	Hamilton	Kinney	Medina	Refugio	Terrell
Bailey	Childress	Donley	Hansford	Kleberg	Menard	Roberts	Terry
Bandera	Clay	Duval	Hardeman	Knox	Milam	Robertson	Throckmorton
Bastrop	Cochran	Eastland	Hardin	La Salle	Mills	Runnels	Trinity
Baylor	Coke	Edwards	Hartley	Lamb	Mitchell	Sabine	Upton
Blanco	Coleman	Falls	Haskell	Lampasas	Montague	San Augustine	Van Zandt
Borden	Collingsworth	Fannin	Hemphill	Lavaca	Morris	San Jacinto	Waller
Bosque	Comanche	Fisher	Hill	Lee	Motley	San Saba	Ward
Brewster	Concho	Floyd	Hudspeth	Leon	Newton	Schleicher	Wheeler
Briscoe	Coryell	Foard	Hutchinson	Limestone	Ochiltree	Scurry	Willacy
Brooks	Cottle	Franklin	Irion	Lipscomb	Oldham	Shackelford	Wilson
Burleson	Crane	Freestone	Jack	Live Oak	Palo Pinto	Shelby	Winkler
Caldwell	Crockett	Frio	Jeff Davis	Loving	Parmer	Sherman	Yoakum
Calhoun	Crosby	Gaines	Jim Hogg	Lynn	Pecos	Somervell	Zapata
Callahan	Culberson	Garza	Jones	Madison	Presidio	Starr	Zavala
Camp	Dallam	Glasscock	Karnes	Marion	Rains	Stephens	
Carson	Dawson	Goliad	Kenedy	Martin	Reagan	Sterling	

Source: American Medical Association Physician Master File/MMS 2014

Below is a breakout of the population of these counties:

Population of Texas Counties With No General Surgeon

Total	Average	High	Low
2,066,766	13,081	76,192	95

The total population of counties in Texas without a general surgeon (2,066,766) is roughly equal to or larger than the population of 14 individual states, including Wyoming, Vermont, North Dakota, South Dakota, Alaska, Delaware, Montana, Rhode Island, New Hampshire, Maine, Hawaii, Idaho, West Virginia and Nebraska, as well as the District of Columbia.

Seventy-four of the Texas counties without a general surgeon currently have a population of approximately 9,400 people or more and therefore potentially could support one or more general surgeons.

Effect on Rural Hospitals

The presence of at least one primary care physician and one general surgeon in a service area supporting a hospital can be essential. The primary care physician is required to admit patients for inpatient and outpatient care while a general surgeon frequently is needed to perform the procedures that keep small (typically Critical Access) hospitals financially viable. Without these two key providers, hospitals may be forced to close. A report entitled *The National Economic Impact of Physicians*, prepared by IMS Health for the American Medical Association, quantifies the economic contributions of office based physicians (see chart below):

Economic Impact of Physicians

- **Total economic output:** The combined economic output of patient care physicians in the United States is \$1.6 trillion.
- **Per capita economic output:** Each physician supports a per capita economic output of \$2.2 million.
- **Jobs:** On average, each physician supports 14 jobs.
- **Wages and benefits:** On average, each physician supports a total of \$1.1 million in wages and benefits.
- **Tax revenues:** On average, each physician supports \$90,449 in local and state tax revenues.

Average Per Capita Economic Output of Patient Care Physicians in Texas

<u>Output (in billions)</u>	<u>Output per Physician</u>
\$78.6	\$1,626,858

Source: *The American Medical Association: The National Economic Impact of Physicians*, prepared by IMS Health March 2014

There are 183 rural hospitals in Texas out of some 580 total licensed hospitals, with “rural” defined as a county population of 75,000 or less (*Texas Organization of Rural and Community Hospitals*). These hospitals provide access to routine care and emergency care to 15% of the state’s population, but cover

85% of the state’s geography. Texas has 80 Critical Access Hospitals (CAHs) that have 25 or fewer beds and are at least 35 miles from another hospital. Because hospitals often are the first or second largest employer in small communities, a “domino effect” takes place when a hospital closes due to lack of physicians. The local economy contracts and the community finds it difficult to attract new businesses to an area with no hospital. It often can be observed that as rural physicians go, so go rural communities.

According to the National Rural Health Association, 48 rural hospitals have closed nationwide since 2010, ten of them in Texas (*The Washington Post, March 15, 2015*).

LOW PHYSICIAN RATIOS AND MALDISTRIBUTION

Some 26,620 physicians in Texas’ 254-county service area (57% of the workforce) practice in the five largest counties in Texas (Harris, Dallas, Tarrant, Bexar, Travis), though these counties are home to 11,667,289 people, or only 44% of the total population.

Smaller Texas counties of 40,000 or less account for 2,264,257 people in Texas (8.6% of the total population) but only 1,170 physicians (2.5% of the total physician workforce).

Physician maldistribution is endemic nationally as well, as some 20% of the U.S. population lives in rural areas while only 9% of physicians practice in these areas, according to the National Rural Health Association. This is an ongoing problem in Texas and throughout the country, and is not likely to abate soon, as few newly trained doctors entering the workforce indicate a preference for rural areas. According to Merritt Hawkins *2015 Survey of Final-Year Medical Residents*, only 3% of physicians completing their training would prefer a community of 25,000 people or less (see chart below).

In What Size Community Would You Prefer to Practice?

10,000 or less	1.2%
10,001 – 25,000	1.9%
25,001 – 50,000	4.4%
50,001 – 100,000	9.9%
100,001 – 250,000	15.6%
250,001 – 500,000	20.5%
500,001 – 1 million	22.8%
Over 1 million	23.7%

Source: Merritt Hawkins 2015 Survey of Final-Year Medical Residents

While having many individual counties that are medically underserved, Texas overall has a ratio of approximately 183 active patient care physicians per 100,000 population, which is considerably lower than the national ratio of 226 physicians per 100,000 population. Texas ranks 41st out of 50 states in physicians per population (see chart below):

Physicians per 100,000 Population/Texas and U.S.

Texas	Texas Rank	United States
182.6	41 nd	225.6

Source: Association of American Medical Colleges 2013 State Physician Workforce Data Book

Rural and Urban Access Issues

Illustrating the dual nature of Texas’ physician workforce, the ratio of physicians-per-population is about the same or higher than the national average in four of Texas’ five most populous counties , with Bexar County an exception (see chart below).

Physicians per 100,000 Population in the Five Most Populous Counties in Texas

Harris County	Dallas County	Tarrant County	Bexar County	Travis County
222	239	264	168	275

By contrast, in Texas counties of 40,000 people or fewer, there is an average of 52 physicians per 100,000 population, just 28% of the overall Texas average and 23% of the national average.

However, even urban areas in Texas have generally fewer physicians per population than cities in other states that have large urban centers (see chart below).

Active Physicians per 100,000 Population for Various Large Cities

<u>City or State</u>	<u>Physicians per 100,000</u>
Boston	450.1
Massachusetts	324
Philadelphia	322.4
Washington, D.C.	320.1
Seattle	297.8
Portland	297.6
New York	288
Maryland	285
Connecticut	281
Rhode Island	279
Denver	271.9
San Diego	270.2
Detroit	268.1
Minneapolis	264.1
Los Angeles	253.9
Miami	253.7
Houston	235.2
Atlanta	212.5
Dallas/Fort Worth	197.2
Texas	182.6
United States	225.6

Source: American Medical Association Physician Master File

Texas therefore must be considered a physician shortage state, though it includes four large counties in which physician-to-population ratios are at or above the national average. However, even within these counties, physician access issues exist.

A 2013 study sponsored by Parkland Hospital and the Dallas County health department indicates physician-to-population ratios vary dramatically within Dallas County, with a preponderance of physicians located in more affluent areas of the county and few doctors located in less affluent areas (see chart below):

Primary Care Physicians per 100,000 Population/Dallas County

Stemmons Corridor	252
South Dallas	113
Northeast Dallas	104
North Dallas	101
Outer Northwest	71
Northwest Dallas	68
Southeast Dallas	54
Irving	42
Southwest Dallas	36
Cedar Hill	32
Desoto/Lancaster	26
Grand Prairie	24
Wilmer-Hutchins/Seagoville	5

Source: *Horizons. The Dallas County Community Health Needs Assessment, 2013.*

Less affluent residents in these counties may have difficulty accessing a physician based on the location of physician offices, lack of transportation to these offices, inability to afford health insurance, or inability to afford co-pays and deductibles. Physician access in Texas is therefore not divided strictly between urban/suburban and rural areas, but is also a function of economic status. The chart below indicates the number of people by state who did not access a physician based on financial limitations in the prior 12 months.

Residents Who Did Not See a Physician in Past 12 Months

Due to Financial Constraints

1	Mississippi	21.7%	46	Iowa	10.5%
2	Arkansas	21.2%	47	Vermont	10.0%
3	Texas	20.9%	48	Hawaii	9.3%
4	Florida	20.8%	49	Massachusetts	9.2%
5	South Carolina	20.5%	50	North Dakota	8.1%

Source: *Kaiser State Health Facts, Kaiser Commission on Medicaid and the Uninsured analysis of the Centers for Disease Control and Prevention’s BRFSS 2012 survey results.*

Texas has the third highest number of residents who are impeded from seeing a physician based on personal financial constraints.

HEALTH PROFESSIONALS SHORTAGE AREAS (HPSAs)

Physician access within individual states, counties and smaller service areas is tracked by the federal Health Resources and Services Administration (HRSA) through Health Professional Shortage Area (HPSA) designations. A whole county or smaller service area is designated as a primary care HPSA if it falls below a ratio of one primary care physician per 3,500 population, a mental health HPSA if it falls below one psychiatrist per 30,000 population, and a dental HPSA if it falls below one dentist per 5,000 population.

Source: Bureau of Clinician Recruitment and Service, Health Resources and Services Administration (HRSA), U.S. Department of Health & Human Services

The chart below shows the total number of primary care, mental health and dentistry HPSAs in the U.S. and Texas and the number of health professionals required to remove the HPSA designations.

Primary Care Health Professional Shortage Areas			
	Total Primary Care HPSA Designations	Percent of Need Met	Practitioners Needed to Remove HPSA Designation
United States	6,087	60.41%	8,073
Texas	375	71.06%	514
Dental Care Health Professional Shortage Areas			
	Total Dental Care HPSA Designations	Percent of Need Met	Practitioners Needed to Remove HPSA Designation
United States	4,878	40.79%	7,208
Texas	240	63.72%	349
Mental Health Care Health Professional Shortage Areas			
	Total Mental Health Care HPSA Designations	Percent of Need Met	Practitioners Needed to Remove HPSA Designation
United States	3,968	50.91%	2,707
Texas	333	46.75%	193

*U.S. totals include data from the territories.

Source: Bureau of Clinician Recruitment and Service, Health Resources and Services Administration (HRSA), U.S. Department of Health & Human Services, HRSA Data Warehouse: Designated Health Professional Shortage Areas Statistics, as of April 28, 2014

A complete list of all the HPSA designated counties and service areas in Texas for primary care, mental health and dental health is included in Appendix A of this report.

As the chart above indicates, it will require 514 additional primary care physicians practicing in the appropriate areas to remove all Texas primary care HPSAs, 193 additional psychiatrists to remove all Texas mental health HPSAs, and 349 additional dental professionals to remove all Texas dental health HPSAs.

It should be noted that removing these designations would not necessarily provide the optimal number of physicians in current HPSA designated areas or ensure reasonable access to physician services. Determining the optimal number of physicians a given area needs is difficult as there is no set standard

or metric for the ideal number of physicians needed to provide accessible, quality care to all population groups.

Merritt Hawkins therefore prefers to follow Dr. Cooper’s model of determining physician community requirements based on the number of physicians by specialty that similarly sized and economically comparable communities have historically been able to sustain. Given this model, the number of physicians required in Texas is considerably higher than the number needed to remove primary care and mental health HPSA designations. To achieve the national ratio of 226 physicians per 100,000 population now sustained by the overall population of the United States, Texas would need 12,819 additional physicians.

It should be further noted that the Texas HPSA designated areas listed in Appendix A include many areas within the largest counties in Texas. Dallas County, for example, includes 15 healthcare facilities designated as HPSAs as well as population groups within West Dallas, Irving, South Dallas, Grand Prairie and other areas. The other largest counties include similarly designated facilities and areas. Nationally, 33% of HPSAs are in non-rural areas, indicating, as referenced above, that physician maldistribution is present in both rural and non-rural areas.

The Texas Physician Education Loan Repayment Program

The Physician Education and Loan Repayment Program (PELRP), administrated by the Texas Education Coordinating Board, is one avenue by which physician supply in HPSAs may be increased. The PELRP provides up to \$160,000 in education loan repayments to physicians over four years. For physicians with loan indebtedness of at least \$160,000 or more, payments are structured as follows:

First year: \$25,000
Second year: \$35,000
Third year: \$45,000
Fourth year: \$55,000

First preference is given to physicians practicing primary care in a Texas HPSA and second preference is given to physicians practice specialty care in a Texas HPSA.

PELRP was substantially defunded by the Texas Legislature for a period of two years and was not accepting loan applications from physicians during that time. However, it now has funding for a two-year period for approximately 200 loans based on the first and second year amounts cited above as is accepting applications. If PELRP continues to maintain funding it may prove to be one method of more evenly distributing physicians throughout the state of Texas and of attracting physicians from out of state.

A GROWING SUPPLY OF PHYSICIANS

Though Texas faces considerable physician supply and access challenges, a positive trend is that the physician workforce in Texas is growing and exceeding population growth, which is unusual by national standards. Between 1987 and 2007, the U.S. population grew by 24% but the number of U.S. trained

physicians added to the workforce grew by only 8% (*New Medical Schools Open but Physician Shortages Persist. American Medical News. March 29, 2010*)

By contrast, total physician supply in Texas has grown from approximately 34,000 physicians in 2004 to 46,953 physicians in 2014, a growth rate of approximately 35% (see chart below). In the same period, the general population in Texas grew from 22,490,022 to 26,956,958, a growth rate of 20%.

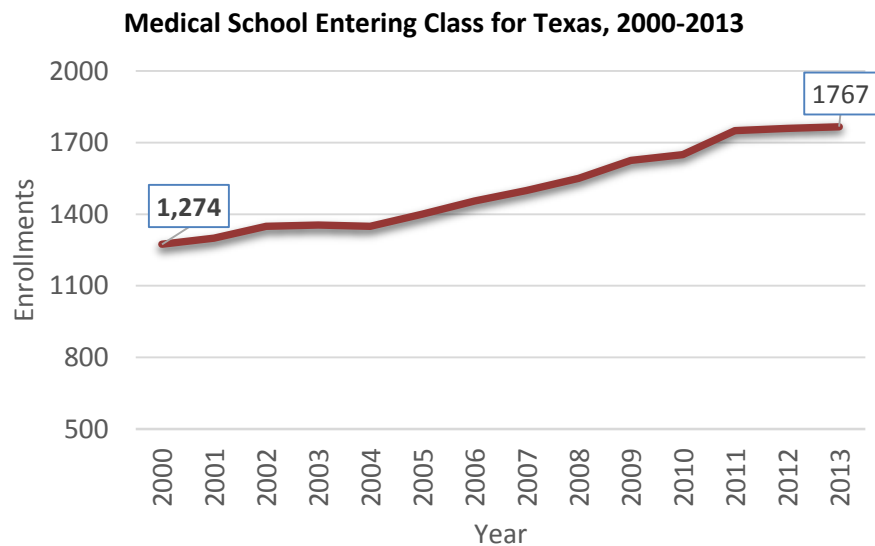

Total Physician Supply in Texas, 2003-2015 (All years rounded except 2014)

2004	2005	2007	2009	2011	2014
33,000	37,000	39,000	40,000	42,000	46,953

Source: Health Professions Resource Center, Department of State Health Services/Texas Medical Association

Many physicians newly licensed in Texas have been attracted from out of the state. Three of four newly licensed physicians in Texas are graduates of medical schools located outside of the state (*Report of Committee on Physician Distribution and Health Care Access, Texas Medical Association, June 2015*). In 2003, Texas elected to put a cap of \$250,000 on non-economic damages per medical malpractice defendant. Before the cap, the average medical malpractice award in Texas was \$1.2 million – it subsequently decreased to \$880,000 (*The Wall Street Journal, May 19, 2008*). Partly as a result, numerous physicians from out of state flocked to Texas -- some 7,000 in the three years following passage of tort reform, swamping the state with requests for licenses. An expanding economy has also been a magnet drawing physicians to Texas.

Nevertheless, physician shortages persist, and Texas is addressing this issue by growing the number of medical school graduates it produces. In 2006, the Association of American Medical Colleges (AAMC) called for a 30% increase in medical school enrollment nationally. Texas met that goal in 2011, well ahead of the AAMC’s national target date of 2015, and the projected achievement date for the nation of 2017 (see chart below).

Source: Texas Higher Education Coordinating Board/Texas Medical Association 2014

Following is a breakdown of physicians per county in Texas in 2004 and 2014, showing rate of growth or decline.

Physician Population per County % Increase/Decrease

County	Physicians- 2004	Physicians- 2014	% increase/decrease
Anderson	40	39	-3%
Andrews	11	10	-9%

Source: American Medical Association Physician Master File/MMS 2014

From 2004-2014, 24 counties in Texas (the majority of them small and rural) experienced a decline in the number of physicians, while 71 experienced 25% or more growth in the number of physicians, further highlighting the “have/have-not” quality of physician supply in the state.

Projected Physician Growth

By 2019, the general population in Texas is projected to increase from 26,448,193 to 29,244,491, a growth rate of 11%. If the physician workforce in Texas continues to grow at the rate it has during the previous five years (17%), it will total approximately 54,935 physicians by 2019. At that point, the ratio of physicians in the state will increase from 183 per 100,000 population to 188 per 100,000 population, still trailing the current national average and the average in 40 states.

THE STATE OF PRIMARY CARE

Primary care services are perceived to be in the greatest demand nationally. In 2010, the Association of American Medical Colleges (AAMC) projected there would be 131,000 too few physicians by 2025, including 65,000 too few in primary care. In March, 2015 the AAMC revised this projection to a maximum shortage of 90,400 physicians by 2025, many of them (but not the majority) in primary care.

Below is a list of physicians by specialty in Texas, including those in primary care (considered in this report to be general practice, family practice, internal medicine, and pediatrics) and those in other specialty areas.

Texas Physicians by Specialty:

Primary Care | 15,296 (67.5%)

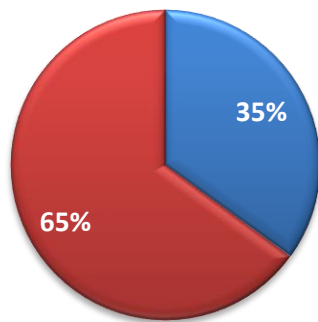

Specialists | 31,657 (32.5%)

Source: American Medical Association Physician Master File/ MMS 2014

The charts below indicate how the percent of primary care physicians in Texas' service area differs from the national physician workforce.

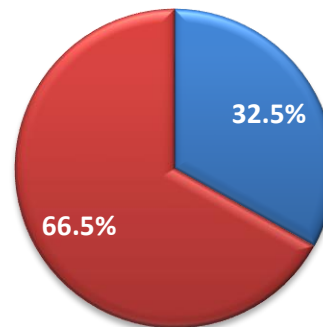

Primary Care Physicians (PCPs) vs. Specialists in Texas and the U.S.

United States

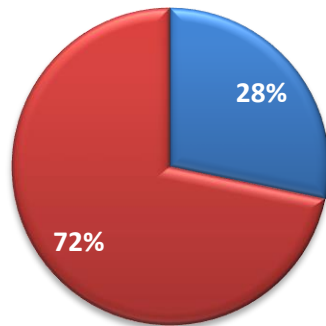

■ PCPs ■ Specialists

All Texas Counties

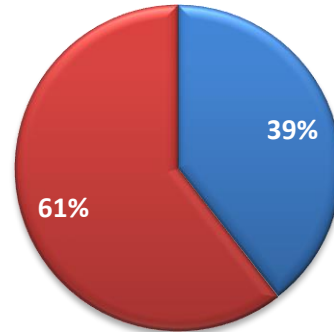

■ PCPs ■ Specialists

Top 5 Metro Counties
Bexar, Dallas, Harris, Tarrant, Travis

■ PCPs ■ Specialists

Remaining Counties

■ PCPs ■ Specialists

Source: SK&A, 2014

As the charts illustrate, 32.5% of physicians in Texas are in primary care, compared to 35% nationally, and only 28% of physicians in the top five metro counties in Texas are in primary care. Texas ranks 47th in the nation in PCPs per 100,000 population, and is particularly top heavy in specialty care in urban areas.

Active Primary Care Physicians per 100,000 Population by State

1	Vermont	115.0	46	Idaho	65.7
2	Massachusetts	110.9	47	Texas	63.3
3	Maine	112.2	48	Nevada	62.6
4	New Hampshire	100.6	49	Utah	60.6
5	Rhode Island	98.5	50	Mississippi	58.8

Source: 2013 State Physician Workforce Data Book. Association of American Medical Colleges.

Nationally, there are 80.7 PCPs per 100,000 population. In Texas, there are 63.3 PCPs per 100,000 population.

Texas will be challenged in “growing its own” primary care physicians, as the state ranks 37th in the country in percent of residents and fellows in primary care graduate medical education programs (see chart below):

Primary Care Residents and Fellows per 100,000 Population

1	New York	32.7	46	Mississippi	6.4
2	Rhode Island	30.0	47	Nevada	6.1
3	Massachusetts	26.1	48	Idaho	4.7
4	Connecticut	24.2	49	Alaska	4.6
5	Pennsylvania	21.2	50	Montana	1.9
37	Texas	9.2		United States	13.6

Source: 2013 State Physician Workforce Data Book. Association of American Medical Colleges

To maintain or increase PCP to population ratios in Texas, more PCPs will need to be trained in the state, and those practicing in other states will have to be recruited.

A SHORTAGE OF SPECIALISTS

Though Texas has relatively high ratio of specialists to primary care physicians, this is not to suggest that there is an adequate supply of medical specialists in the state.

Texas ranks below U.S. averages for physicians per 100,000 population for 36 out of 40 major medical specialties, including 33 non-primary care specialties. The chart below shows some of the specialties in which Texas is deficient relative to national averages.

Texas Ratio of Physicians per 100,000 pop. As a % of U.S. Ratio

Family medicine	87.6%
Internal medicine	75.1%
Pediatrics	75.1%
Emergency medicine	75.9%
Pulmonary disease	73.8%
Cardiovascular disease	76.0%
Child and adolescent psychiatry	68.8%
Psychiatry	58.2%
Vascular medicine	43.0%

Source: Report of Committee on Physician Distribution and Healthcare Access. Texas Medical Association, June 2014

The only four specialties out of 40 referenced in the Texas Medical Association report cited above in which Texas is above national per capita numbers are aerospace medicine, medical genetics, transplant surgery and colon and rectal surgery.

In addition to having fewer specialists per capita than national averages, specialists are unevenly distributed in Texas. As outlined above, many Texas counties lack a single general surgeon, psychiatrist or obstetrician, though they may have the necessary population to sustain these and other specialty practices.

Attrition among the ranks of specialists also will be a growing concern in Texas and nationally, as physicians in many specialty areas are older on average than physicians in primary care (see chart below):

Physicians 55 and Older By Specialty

<u>Specialty</u>	<u>55 or older</u>
Pulmonology	73%
Oncology	66%
Psychiatry	60%
Cardiology	54%
Orthopedic surgery	52%

Neurology	50%
General surgery	48%
Urology	48%

Primary Care

Internal Medicine	40%
Family Practice	38%
Pediatrics	38%

Source: AMA Physician Master File, June 2014

In general, older patients have a more pronounced need for medical specialists than do younger patients, as specialists treat the diseases and other medical conditions associated with old age. The Texas population is relatively younger than the U.S. population, somewhat inhibiting the need for specialists; nevertheless it includes over 2.9 million people who are 65 years old or older, many of them concentrated in rural counties.

PHYSICIAN RETENTION IN TEXAS

On a positive note, Texas retains a relatively high number of the physicians it educates and trains. Texas ranks second in the nation in retaining medical school graduates, trailing only California, and ranks fifth in retention of physicians completing medical residency (see charts below):

Physicians Retained From Undergraduate Medical Education

1	California	62.4%
2	Texas	59.4%
3	Arkansas	58.4%
4	Mississippi	54.4%
5	Hawaii	52.8%

Physicians Retained From Graduate Medical Education

1	California	69.5%
2	Alaska	67.8%
3	Montana	63.3%
4	Florida	58.7%
5	Texas	57.9%

Source: State Physician Workforce Data Book. Association of American Medical Colleges. 2013

Though Texas ranks high in terms of retention of physicians educated and trained in the state, it should be considered that the ability of the physician graduate medical education system in Texas to train more physicians is limited. The State of Texas will spend \$32.8 million to finance nearly 6,500 medical residency positions in 2014-15, according to the Texas Higher Education Board, but it will be challenged to continue retaining these physicians, as the chart below illustrates.

Medical School Graduates and Residency Positions/ Texas/2013

Entry level GME positions/allopathic	1,568
Entry level GME positions/osteopathic	43
Medical school graduates	1,587

Source: Association of American Medical Colleges/Texas Medical Association

As the numbers above show, in 2013, there were only 24 more residency positions in Texas than there were medical school graduates. These residency positions can also be matched with medical graduates from medical schools in other states and with graduates of international medical schools. The Texas Higher Education Coordinating Board recommends a ratio of residency positions that is 10% higher than the number of medical school graduates in a given state, which would require the addition of 135 additional GME positions in Texas as of 2013 and 589 positions by 2022. (*Report of Committee on Physician Distribution and Health Care Access. Texas Medical Association, June 2014*)

At present, three new medical schools are being added in Texas, including the University of Texas at Austin Dell School of Medicine and the South Texas School of Medicine in McAllen and Harlingen, which will admit a total of 100 new allopathic medical students in 2016. The University of the Incarnate Word in San Antonio, a new private medical school, will admit its first class of 150 osteopathic medical students, also in 2016. With projected expansion of medical schools planned by Texas Tech University and Texas A&M University, the combined increase to the class size for the state by 2018 will be 320 students. Texas will then have 12 medical schools (*Report of Committee on Physician Distribution and Health Care Access. Texas Medical Association, June 2014*).

However, no corresponding increase in the number of residency programs is planned, and this will be a key challenge to maintaining adequate physician supply in the state.

DIVERSITY CHALLENGES

Health policy planners and the academic medical establishment are striving to achieve diversity in the physician workforce so that it more closely mirrors the ethnic composition of the general population.

Following is a breakdown of the ethnic composition of the physician workforce in the U.S. and Texas, as well as a breakdown of the general population in the U.S. and in Texas.

The Physician Workforce by Ethnic Composition/ U.S. and Texas

<u>United States</u>								
<i>Anglo</i>		<i>Black</i>		<i>Hispanic</i>		<i>Asian*</i>		<i>Other</i>
77.9%		4.2%		4.6%		12.5%		0.8%
<u>Texas</u>								
<i>Anglo</i>		<i>Black</i>		<i>Hispanic</i>		<i>Asian</i>		<i>Other</i>
72.9%		3.9%		8.7%		14.2%		N/A

Source: Health Professions Resource Center, Center for Health Statistics, Texas Department of State Health Services, 2012

*Principally Asian, also Pacific Islander, Native American

General Population by Ethnic Composition/ U.S. and Texas

<u>United States</u>				
<i>Anglo</i>	<i>Black</i>	<i>Hispanic</i>	<i>Other**</i>	<i>Total Population</i>
199,161,169	41,096,749	41,096,749	22,129,019	316,128,839
63%	13%	17%	7%	100%
<u>Texas</u>				
<i>Anglo</i>	<i>Black</i>	<i>Hispanic</i>	<i>Other</i>	<i>Total Population</i>

43%	11%	40%	6%	100%

Source: Texas Department of State Health Services 2014

**Principally Asian, also Pacific Islander, Native American

As these number indicate, the general population in Texas includes a considerably higher percent of Hispanics than the general U.S. population, slightly fewer blacks, and a slightly higher number of Asians.

The physician workforce in Texas has approximately the same number of blacks as the national physician workforce and a somewhat higher number of Asians than the national physician workforce. However, the number of Hispanic physicians in Texas is about twice that of the national physician workforce, 8.7% in Texas compared to 4.6% nationally. Nevertheless, the number of Hispanic physicians in Texas is not representative of the Hispanic population in the state, nor is the number of black physicians in Texas representative of the black population. Both groups are significantly underrepresented. Asian physicians, by contrast, are overrepresented relative to the general population of Asians in Texas.

As is the case with the physician workforce, ethnic diversity in Texas varies based on geographic location. Following is an ethnic breakdown of the four most populous Metropolitan Statistical Areas in Texas.

Texas' Most Populous MSAs by Ethnic Composition

<u>Dallas-Fort Worth-Arlington MSA</u>				
<i>Anglo</i>	<i>Black</i>	<i>Hispanic</i>	<i>Other</i>	<i>Total Population</i>
3,301,969	1,035,759	2,055,032	578,837	6,971,597

Source: Texas Department of State Health Services 2014

The Dallas-Fort Worth-Arlington MSA, as defined by the Texas Department of State Health Services, has a population of 6,971,597, or 25.7% of Texas' overall population, and includes a higher number of blacks than the Texas population (15% vs. 11%), though a lower number of Hispanics (29% vs. 40%), and a slightly higher number of Asians (8% vs. 6%).

The Houston-The Woodlands-Sugar Land MSA has a population of 6,473,316, or 23.8% of Texas' population, also with a higher percent of blacks than the Texas population (17% vs. 11%), a lower number of Hispanics (38% vs. 40%) and a higher number of Asians (9% vs. 6%).

The Austin-Round Rock MSA has a population of 1,932,430, or 7.1% of Texas' overall service population, with a lower number of blacks than the Texas population (7% vs. 11%), a lower number of Hispanics (33% vs. 40%), and a higher number of Asians (8% vs. 6%).

Lastly, the San Antonio-New Braunfels MSA has a population of 2,330,586, or 8.6% of Texas' overall service population, with a lower number of blacks than the Texas population (6% vs. 11%), a considerably higher number of Hispanics (55% vs. 40%), and a greater number of Asians (8% vs. 6%).

Together these four MSAs have a population of 17,707,929, or 65.2% of the total population in Texas. Just under 4% of Texas physicians are black, while 14% of the population in the state's four most

populous MSAs are black. 8.7% of Texas physicians are Hispanic, while 36% of the population in the state’s four most populous MSAs are Hispanic. 14.2% of Texas physicians are Asian while 8% of the population in the state’s four most populous MSAs are Asian.

To achieve diversity, Texas will have to add considerably more black physicians, particularly to its largest MSAs, while Hispanic physicians will need to be added throughout the state as they are more highly represented outside the most populous MSAs than inside. There are approximately 3,800 Spanish speaking physicians in Texas, or about 8.1% of the total physician population (*AMA Physician Master File*). With Spanish-speaking residents representing a fast growing segment, more Spanish speaking doctors will be required to meet the needs of this culturally diverse population.

A GROWING DEMAND FOR PHYSICIANS

In addition to low physician-to-population ratios, a geographic maldistribution of physicians, physician retention challenges, and a need for greater diversity in the physician workforce, further challenges will have to be addressed to ensure an adequate number of physicians in Texas. One of these challenges is a rapidly growing demand for physician services in the state.

Texas experienced a population growth of 8 million people from 1990 to 2010 and led the nation in population growth in both the 2000 and 2010 census.

The population will grow by 5 million more people by 2020, according to the U.S. Census Bureau.

In addition, there are over 2.9 million Texans who now are 65 years old or older and who are Medicare eligible, while 5.7 million baby boomers in the state started to become eligible for Medicare in 2011. Over 11% of the state’s population is composed of people 65 or older who are Medicare eligible, compared to 14.1% of the U.S. population, so age-driven demand for doctors in Texas will be somewhat less of a factor than in states with an older population.

However, population aging also is a regional issue within the state. In 23.5% of Texas’ 254 counties (the majority of them small and rural), 20% or more of the population is 65 years old or older (see the chart listing these counties on page 45). This will drive demand for physicians relatively higher in those areas of the state that already have the most pronounced physician shortages. As the chart below indicates, the Medicare eligible see a physician at a much higher rate than do younger people.

Annual Visits to Physician Offices by Age (Excludes Emergency Department Visits)

66 years old or older	6.0
46-66 years old	5.4
36-45 years old	2.4
24-35 years old	2.2
16-24 years old	1.5
0-15 years old	2.0
Average	3.4

Source: National Ambulatory Medical Care Survey/Centers for Disease Control

At the other end of the spectrum, physician need in Texas also will be driven by its high birth rate. Texas has a birth rate of 15.4 per 1,000 population, the third highest in the country behind Alaska and Utah (*U.S. Census Bureau*).

Disease Incidence and Demand for Doctors

Like the general population of the U.S., the Texas population is facing a wide range of health challenges.

Eleven percent of Texas adults have been diagnosed with diabetes, 66% have been diagnosed as overweight or obese, 38% have been diagnosed with high cholesterol, and 31% have been diagnosed with hypertension (see chart below). Diabetes and obesity are particularly prevalent in Texas.

	Diabetes Death Rate per 100,000	Percent of Adults Who Have Diabetes	Cancer Incidence per 100,000	Cancer Death Rate per 100,000	Percent of Adults Who Have Hypertension	Percent of Adults Who Have High Cholesterol	Has Cardiovascular Disease	Heart Disease Death Rate per 100,000	Adult Overweight/Obesity Rate
United States	20.8	10%	459	172.8	33%	39%	2%	179.1	64%
Texas	21.6	11%	434.7	165.9	31%	38%	2%	181.1	66%
Rank amongst all states including D.C. (51). All rankings based on the highest rate to lowest rate.	23	13	42	42	29	31	34	22	16

Source: Centers for Disease Control and Prevention (CDC), National Center for Health Statistics, Division of Vital Statistics, National Vital Statistics Report Volume 61, Number 4, Table 19, May 8, 2013

Continued high rates of disease, driven by obesity, diabetes, and hypertension, in particular, will accelerate the need for additional physicians in Texas.

Impact of Insurance Enrollment on Physician Demand in Texas

Demand for physician services is partly a function of the prevalence of health insurance coverage in a community or service area. As the Massachusetts Medical Society has indicated in several studies, Massachusetts has long physician appointment wait times (see *Massachusetts Medical Society 2013 Patient Access to Care*). Similarly, in its 2014 *Survey of Physician Appointment Wait Times and Medicaid and Medicare Acceptance Rates*, Merritt Hawkins found that Boston has the highest physician appointment wait times of 15 major metro areas (see chart on next page). This is largely due to the fact that Massachusetts, including Boston, has achieved the highest rate of insurance coverage of any state, driving up the demand for physician services.

Cumulative Average Wait Time in Days for a Physician Appointment in Five Specialties (Family Practice, Dermatology, Obstetrics/Gynecology, Orthopedic Surgery, Cardiology)

<u>Metro Area</u>	<u>Time to Appointment (Days)</u>
Dallas	10.2
Los Angeles	12.2
Miami	13.6
Houston	14.0
Atlanta	14.0
Seattle	16.0
San Diego	16.2
New York	16.8
Washington, D.C.	17.8
Detroit	17.8
Minneapolis	19.2
Portland	19.4
Philadelphia	20.6
Denver	23.6
Boston	45.4
<hr/>	
Total Cumulative Average	18.5

Source: Merritt Hawkins 2014 Survey of Physician Appointment Wait Times

In contrast to Massachusetts, Texas ranks first in percent of population without health insurance (see chart below).

Population without Health Insurance Coverage

1	Texas	22.1%
2	Nebraska	20.7%
3	Florida	20.0%
4	Georgia	18.8%
5	Alaska	18.5%
<hr/>		
	United States	14.5%
	Texas Children	16.0%
	United States Children	9.0%

Source: Health Insurance Coverage in the United States. U.S. Census. 2013

Demand for doctors in Texas is relatively inhibited for this reason, which helps explain why physician appointment wait times listed above in Texas cities such as Dallas and Houston are comparatively short even though these cities have fewer physicians per capita than most others on the list.

The chart below indicates health insurance coverage patterns in Texas.

Health Insurance in Texas

Employer	46%
Other private	5%
Medicaid	15%
Medicare	12%
Uninsured	22%

Source: *Health Insurance Coverage in the United States. U.S. Census. 2013*

ACA/State Exchanges

The Affordable Care Act (ACA) has increased insurance coverage in Dallas County, with the number of uninsured patients believed to have dropped from 28% to 22% since the law went into effect (*Poor Seek Care in Medical Deserts. Dallas Morning News, January 18, 2015*). The ACA also has increased the ranks of the insured throughout other areas of Texas.

Since the first open enrollment period, Texas enrollment through ACA established State Insurance Marketplaces/Exchanges grew to 733,757 between October 1, 2013 and April 19, 2014 (see chart below for enrollee characteristics).

Characteristics of Texas State Insurance Exchange Enrollees

55% female | 45% male
38% under the age of 35
30% between the ages 18 and 34
67% selected a Silver plan | 23% selected a Bronze plan
84% selected a plan with financial assistance

Source: www.HHS.gov/Healthcare

The second open enrollment period began November 15, 2014, and thousands of additional Texans are likely to be enrolled by the end this enrollment period.

Texas chose not to expand Medicaid through the ACA. Since the first ACA open enrollment period in October, 2013, 134,363 Texans have gained Medicaid or Children's Health Insurance Program (CHIP) coverage. If Texas had expanded Medicaid, an additional 1,208,000 uninsured people would be able to gain coverage (www.HHS.gov/Healthcare.com).

Though Texas chose not to expand Medicaid through the ACA, Medicaid patient access to physicians in Texas grew at least temporarily as a result of the ACA, according to a *New England Journal of Medicine* study. The ACA funded a Medicaid reimbursement raise to physicians beginning in 2013 and ending December 31, 2014. Under this raise, Medicaid paid the same rate to family physicians, internists and pediatricians as Medicare. The higher reimbursement was available in states that expanded Medicaid and in those that did not.

The study found that the availability of primary care appointments for Medicaid patients increased by an average of 8% in the ten states included in the study, and by 10% in Texas. Because Texas Medicaid reimbursement rates are relatively low compared to other states, Texas physicians received a relatively high pay hike of approximately 66%. (*Medicaid Pay Hike Opened Doors for Patients, Study Finds. Kaiser Health News. January 21, 2015*). The pay raise was enough to persuade Texas doctors who see Medicaid patients to schedule a greater number of such patients. However, the study did not examine if the pay raise led more physicians in Texas and elsewhere to participate in the Medicaid program.

Now that Medicaid rates have been reduced, it can be presumed that Medicaid patient accessibility to primary care physicians will decline.

PHYSICIAN PRACTICE PATTERNS/EFFECT ON ACCESS

The gross number of physicians practicing in a given service area is not the sole determinant of physician supply and physician access in that area. How physicians choose to practice – the types of patients they see, the number of patients they see, the hours they work, and related factors – also are important.

Physician practice patterns that affect patient access are reviewed below, beginning with Medicare and Medicaid acceptance rates among Texas physicians. The charts below indicate the number of people in Texas by county eligible for Medicare or Medicaid, the Texas counties where the Medicare eligible population is at or exceeds 20%, and the Texas counties where the Medicaid eligible population is at or exceeds 20%.

Eligible for Medicare/Medicaid by County in Texas

County	Population (2013)	Age 65+ %	Age 65+ Population	Poverty %	Poverty Population

Source: United States Census Bureau, 2014

As these numbers show, 17.6% of Texas' population is below the poverty level and may qualify for Medicaid, compared to 15.4% nationally. There are 78 counties in Texas where Medicaid eligible residents make up 20% or more of the population, and 11 counties where Medicaid eligible residents make up 30% or more of the population. The chart below indicates current Medicaid/CHIP enrollment in Texas and nationally.

State	State Medicaid & CHIP Enrollment			National		
	Total Medicaid & CHIP Enrollment (October 2014) (Preliminary)	Comparison of October 2014 data to July-September 2013 Average Enrollment		Total Medicaid & CHIP Enrollment, all States (October 2014) (Preliminary)	Comparison of October 2014 data to July-September 2013 Average Enrollment	
		Net Change	% Change		Net Change	% Change
Texas	4,679,930	238,325	5.37%	68,529,576	9,683,006	16.76%

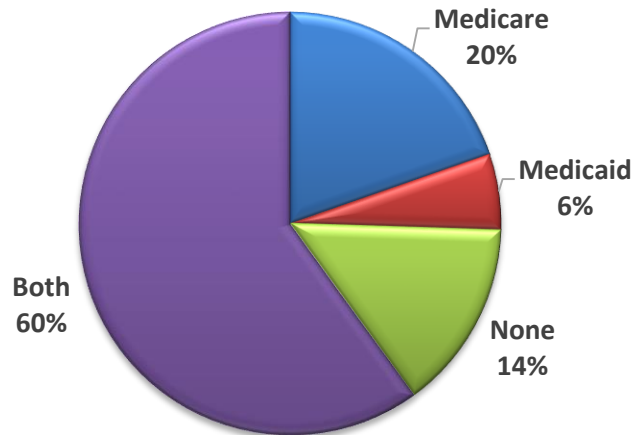

Source: Centers for Medicare & Medicaid Services, Medicaid.gov

As referenced above, 11.2% of Texas' population has reached the age of Medicare eligibility compared to 14.1% of the general population. There are 69 mostly rural Texas counties where Medicare eligible residents make up 20% or more of the population and one Texas County where Medicare eligible residents make up 30% or more of the population.

Whether those eligible for these government health insurance programs in Texas have reasonable access to physicians is determined to a significant extent by the number of physicians who accept these forms of insurance. The charts below reflect these numbers.

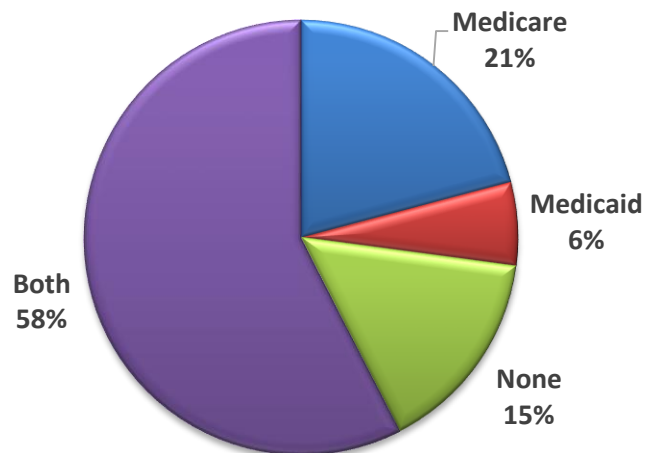

Physician Medicare and Medicaid Acceptance Rates in Texas

All Texas Counties

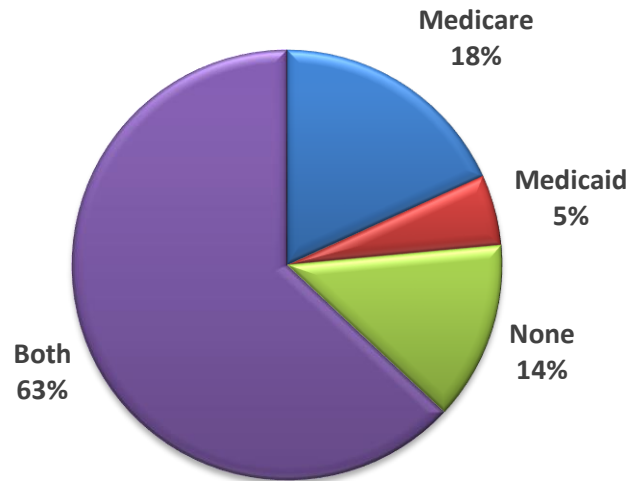

Top 5 Metro Counties

Bexar, Dallas, Harris, Tarrant, Travis

Remaining Counties

Source: SK&A, 2014

As these numbers indicate, the rate of Medicaid acceptance by physicians in Texas is 66%; the rate in the top five most populous counties is slightly lower at 64%; and the rate for the remaining less populous counties is 68%, indicating the rate of Medicaid acceptance in rural counties in Texas is slightly higher than in metro counties.

The number of Texas physicians who do not accept Medicaid (34%) is higher than the national average of 18%, as determined by the *2014 Survey of America's Physicians*, which Merritt Hawkins conducted on behalf of The Physicians Foundation (www.physiciansfoundation.com).

In this extensive survey, based on data provided by over 20,000 physicians it showed that 31% of Texas physicians indicated they do not accept Medicaid (margin of error +/- .78% based on analysis provided by survey research experts at the College of Business Administration, University of Tennessee), a number similar to the 34% of Texas physicians who do not accept Medicaid as tracked by the data company SK&A referenced above. The chart below shows where Texas ranks by physicians who do not accept Medicaid:

Source: *A Survey of America’s Physicians/The Physicians Foundation/Merritt Hawkins, 2014*

In an additional survey, Merritt Hawkins examined physician appointment wait times and Medicare and Medicaid acceptance rates among physicians in five specialties (including family medicine) in 15 large metro areas nationwide. Two of these metro areas (Dallas/Fort Worth and Houston) are in Texas. The chart below indicates that Medicaid acceptance rates by physicians are lower in Dallas/Fort Worth than in all other cities except Denver, while Medicaid acceptance rates in Houston fall at the median point.

Rates of Medicaid Acceptance by Physicians in Metro Areas

<u>Metro Area</u>	<u>Rate of Acceptance</u>
San Diego	86%
Washington, D.C.	71%
Philadelphia	67%
Boston	65%
Portland	60%
Miami	56%
Seattle	55%
Houston	55%
Los Angeles	53%
Detroit	50%
Atlanta	40%
Minneapolis	35%
New York	32%
Dallas/Fort Worth	30%
Denver	20%

Source: Merritt Hawkins 2014 Survey of Patient Appointment Wait Times

While Texas has a relatively high Medicaid eligible population, it also has a relatively high number of physicians who do not accept Medicaid.

Low Medicaid acceptance rates may be driven by the fact that a relatively high number of Texas physicians remain in independent practice. Because Medicare and Medicaid reimbursement rates often are relatively low compared to commercial rates, private practice doctors often have to limit the number of these patients in order to keep their practices financially viable. According to the Center for Medicare and Medicaid Services (CMS) Office of the Actuary, Medicare payments are about 80% of private health insurance while Medicaid payments are about 58%. In addition, Medicaid reimbursement rates in Texas are the 11th lowest in the nation (chart below):

Medicaid Physician Reimbursement Rates as a Percent of the National Average for All Services (Lowest to Highest)

1	Rhode Island	.58
2	Michigan	.76
3	New Jersey	.77
4	California	.80
5	New York	.87
6	Missouri	.87

Source: Medicaid Physician Fee Index. Kaiser Family Foundation.

This virtually assures that Medicaid patients in Texas will have a difficult time accessing a regular physician, and likely will rely heavily on hospital emergency departments, urgent care centers, and Federally Qualified Health Centers (FQHCs) for physician services. As stated above, should Texas rethink its position on expanding Medicaid eligibility, over 1.2 million people would qualify for coverage. However, given low rates of Medicaid acceptance among Texas physicians, it is likely that many of those newly insured through Medicaid expansion would not be able to obtain timely access to a doctor.

Impact of FQHCs

FQHCs provide a site of service for those without insurance and for the medically underserved. The ACA expanded funding for FQHCs whose mission is to provide affordable, quality care to traditionally underserved populations. There are 70 FQHCs in Texas employing 497 physicians (see list below):

FQHCs in Texas

Year Funded	Federal Qualified Health Center Name	City	Number of Physicians Employed/Affiliated

Source: Texas Department of State Health Services, 2013

These facilities saw 1,727,000 individual patients in 2013, up from 1,085,199 in 2012, and handled 3,111,869 patient visits (*National Association of Community Health Centers/Texas Health Center Fact Sheet*). As the chart above indicates, 15 of these centers have been added since 2009 or later. The FQHC model is growing rapidly around the country, and given Texas’ high rate of uninsured and large number of underserved areas, the model appears particularly appropriate for the state.

Impact of Urgent Care/Retail

Urgent care centers are another delivery model that is proliferating across the nation and in Texas (see chart below).

Growth in Urgent Care

- 9,300 urgent care centers in the U.S.
- 40% to expand to a new site
- 85% expect new patient growth
- 50% free standing
- 50% in retail shopping areas

Source: Becker’s Hospital Review. August, 2014

Currently, there are 706 urgent care centers in Texas. A list of Texas urgent care centers is included in Appendix B. These centers generally are staffed with physician assistants (PAs) and nurse practitioners (NPs) but may also have a physician (usually in primary care) on-site or supervising. Urgent care centers are increasing points of health care access, but not necessarily for those who do not have insurance or who are underserved. They principally provide convenient care to those who are insured but do not have timely access to a physician, and usually are located in urban/suburban retail areas.

These centers represent a movement toward consumer driven care in which the larger entities that tend to own these centers can be “everywhere, all the time.” They feature the employed physician model and offer physicians set schedules, thereby likely reducing overall physician FTEs while at the same time increasing points of patient access (see below for a discussion of how physician employment is reducing FTEs).

Urgent Care/ Retail Facilities in the Five Most Populous Counties in Texas

Harris County	Dallas County	Tarrant County	Bexar County	Travis County
157	86	57	65	39

As these numbers indicate, 57% of Texas’ urgent care centers are located in the five most populous counties in the state, which 44% of the population resides.

Medicare Acceptance

Given Medicare’s relatively high reimbursement rate compared to Medicaid, the rate of Medicare acceptance by physicians in Texas is higher than the acceptance rate for Medicaid, as is to be expected.

As the charts above show, the rate of Medicare acceptance in Texas is 80%, the rate in the top five most populous counties is 79%, and the rate in the remaining counties is 81%, indicating that the rate of Medicare acceptance is higher in rural counties than in metro counties.

Of note is that fact that 14% of physicians in Texas do not accept Medicare nor do 15% of physicians in the top five most populous counties, and 14% of physicians in the remaining counties do not, according to SK&A data. As Richard Johnston, M.D. of USMD Holdings, Inc., a 350-physician group with offices throughout Dallas-Fort Worth calculates, independent primary care physicians can only afford to have 5%-10% of their practices composed of Medicare patients, after which the practice becomes fiscally unviable.

In the *2014 Survey of America's Physicians* referenced above, 18% of Texas physicians indicated they do not accept Medicare patients, a number somewhat larger than the 14% SK&A reports. The following chart shows where Texas physicians rank in Medicare acceptance rates relative to physicians in other states.

Physicians Who Do Not Accept Medicare by State

1	Hawaii	19.1%	26	Illinois	12.3%
2	Texas	18.3%	27	Alabama	12.0%
3	West Virginia	17.9%	28	North Carolina	12.0%
4	Rhode Island	17.8%	29	Ohio	11.3%

25	Arkansas	12.4%	50	North Dakota	5.0%

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins, 2014*

The survey Merritt Hawkins conducted examining Medicare acceptance rates in 15 metro areas further indicates that Medicare acceptance rates by Texas physicians are relatively low.

Medicare Acceptance Rates in 15 Major Metro Areas

<u>Metro Area</u>	<u>Rate of Acceptance</u>
Boston	98.0
Detroit	95.8
Washington, D.C.	86.4
Los Angeles	86.3
Philadelphia	86.2
Portland	86.0
Seattle	85.7
Atlanta	82.0
Denver	74.4
Dallas	74.0
Houston	73.6
San Diego	70.2
Miami	68.7
New York	49.0
Minneapolis	38.2

Source: Survey of Physician Appointment Wait Times and Medicaid and Medicare Acceptance Rates/Merritt Hawkins, 2014

Though Texas has fewer Medicare eligible residents than the general population, somewhat inhibiting demand for physician services, it nevertheless has 5.7 million baby-boomers who began accessing Medicare in 2011. Given low Medicare acceptance rates and physician deficits in Texas, both in primary care and specialty care, Medicare eligible patients are likely to find it increasingly difficult to obtain timely access to physicians.

State Exchange Participation Rates

The state insurance exchanges established by the ACA have expanded the number of people in the U.S. who have health insurance. As of February 15, 2015, 9.1 million people nationwide are expected to have obtained health insurance through the exchanges (*healthcare.gov*).

As with Medicare and Medicaid, the ability of these patients to see a physician will be determined to a large extent by the number of doctors participating in the exchanges.

Based on the results of The Physicians Foundations survey cited above, 25.8% of Texas physicians participate in state insurance exchanges, compared to 33.3% of physicians nationwide. The chart below shows where Texas physicians rank in terms of participation in state exchanges:

Physicians Participating in State Exchanges Established by the ACA by State

1	Vermont	62.5%	26	Georgia	32.8%
2	Idaho	55.6%	27	Maryland	31.9%

3	Arkansas	54.9%	28	Illinois	31.7%
4	Washington	48.2%	29	New York	31.5%
5	Massachusetts	45.8%	30	Michigan	31.1%
6	Colorado	44.7%	31	Missouri	30.4%
7	Connecticut	44.2%	32	Delaware	30.3%
8	Nevada	43.9%	33	Ohio	29.3%
9	New Hampshire	43.0%	34	Kansas	29.1%
10	Oregon	42.8%	35	Pennsylvania	29.0%
11	Maine	42.4%	36	Utah	28.5%
12	Minnesota	42.2%	37	Rhode Island	28.1%
13	Arizona	39.8%	38	Virginia	28.1%
14	Montana	39.2%	39	West Virginia	28.1%
15	Wisconsin	38.8%	40	Hawaii	26.8%
16	Indiana	38.6%	41	North Carolina	26.6%
17	Wyoming	38.2%	42	South Dakota	26.2%
18	Kentucky	38.0%	43	Texas	25.8%
19	New Mexico	37.5%	44	Florida	25.5%
20	Nebraska	36.2%	45	Alabama	25.1%
21	South Carolina	36.2%	46	Mississippi	24.2%
22	California	36.0%	47	New Jersey	23.4%
23	Iowa	34.9%	48	North Dakota	22.6%
24	Tennessee	34.3%	49	Louisiana	22.4%
25	Alaska	34.2%	50	Oklahoma	20.6%

Source: *A Survey of America’s Physicians. The Physicians Foundation/Merritt Hawkins, 2014.*

As the survey indicates, Texas ranks 43rd in state exchange participation. 37.3% of Texas physicians indicated they have no plans to participate in the exchanges, while 10.8% said they do not participate but are likely to. The current low physician participation rate indicates those covered through the exchanges also may be challenged to find a regular physician.

Overextended and Overworked

The reasons why physicians may not be willing or able to accommodate those insured through Medicare, Medicaid and the state exchanges are not exclusively economic. In The Physicians Foundation survey referenced above, the majority of physicians nationally and in Texas indicated they now are overextended or are at full capacity. Nationally, 81% of physicians indicated they are now overextended or are at full capacity, while only 19% said they have the time to see more patients or take on new duties. The chart below indicates percent of physicians who are overextended or who are at full capacity by state.

Physicians Who Are At Capacity or Overextended

1	Wyoming	97.1%	26	Delaware	80.2%
2	Vermont	87.2%	27	Utah	80.1%
3	Massachusetts	86.8%	28	Kentucky	79.9%

4	Pennsylvania	86.2%	29	Mississippi	79.9%
5	Minnesota	85.7%	30	New York	79.4%
6	Ohio	85.4%	31	Nebraska	79.3%
7	Arkansas	85.0%	32	Rhode Island	79.3%
8	Washington	84.4%	33	Virginia	79.3%
9	Colorado	84.2%	34	West Virginia	79.3%
10	Connecticut	83.9%	35	Florida	79.1%
11	Michigan	83.3%	36	North Dakota	79.1%
12	Missouri	83.0%	37	Illinois	78.9%
13	North Carolina	83.0%	38	New Hampshire	78.9%
14	Nevada	82.6%	39	Texas	78.6%
15	Maryland	82.5%	40	South Carolina	78.5%
16	Montana	82.3%	41	Wisconsin	78.5%
17	Arizona	82.2%	42	Georgia	78.1%
18	Tennessee	82.1%	43	Indiana	77.8%
19	California	81.8%	44	Maine	77.6%
20	New Mexico	81.2%	45	Oklahoma	77.6%
21	Alaska	81.1%	46	Hawaii	77.0%
22	Oregon	81.1%	47	Kansas	76.0%
23	South Dakota	81.0%	48	Louisiana	73.5%
24	Iowa	80.7%	49	Alabama	73.4%
25	New Jersey	80.6%	50	Idaho	72.1%

Source: A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins, 2014

Though Texas physicians are not at the top of this list, the great majority (78.6%) are overextended or are at full capacity, while only 21.4% have the time to see more patients or take on more duties.

New responsibilities, such as implementation of ICD-10, are likely to consume additional physician time. When asked about ICD-10 implementation in The Physicians Foundation Survey, 58% of Texas physicians said it is likely to cause a severe administrative problem, compared to 50% of physicians nationally.

Finding capacity in the current physician workforce will therefore be a challenge, and additional doctors will need to be trained in the state or recruited to Texas from other areas of the country to ensure timely access to physician services.

Physician Practice Plans

Medical practice in the United States traditionally has been characterized by full-time work in mostly clinical roles in an independent, privately owned setting.

However, types of settings in which physicians choose to practice are changing. Doctors are no longer limited to working in solo or small, independent group practices. Today, they can be employed by a hospital, a large medical group, an urgent care center, FQHC, retail clinic, large employer, insurance company or a variety of other entities.

Similarly, physicians no longer are limited to full-time, clinical private practice. Many physicians, dissatisfied with the current medical practice environment, are seeking alternatives to traditional practice styles. The Physicians Foundation survey referenced above asked physicians to indicate what they plan to do in the next one to three years. Results for all physicians and for Texas physicians are indicated below:

In the Next One to Three Years, Do You Plan To:

	Texas	All
Continue as I am	52.1%	56.4%
Cut back on hours	19.4%	18.2%
Retire	11.7%	9.4%
Switch to a cash/concierge practice	9.0%	6.2%
Work locum tenens	9.3%	9.1%
Cut back on patients seen	9.9%	7.8%
Seek a non-clinical job within healthcare	11.0%	10.4%
Seek employment with a hospital	6.9%	7.3%
Work part-time	6.4%	6.4%
Close my practice to new patients	3.3%	2.4%
Other	6.9%	5.3%

Source: A Survey of America’s Physicians. The Physicians Foundation/Merritt Hawkins, 2014

While 52.1% of Texas physicians plan to continue their current style of practice, compared to 56.4% nationally, 47.9% plan to take one or a variety of steps likely to reduce patient access to their services. These steps include cutting back on hours, retiring, reducing the number of patients they see, working locum tenens, seeking a non-clinical job, working part-time or closing their practice to new patients.

While it is difficult to quantify exactly how these changes will affect physician FTEs and patient access to medical services in Texas, some inferences can be made. Below is an examination of the potential impact on patient access to medical services should physicians in Texas choose to transition to concierge medicine.

The Impact of Concierge Medicine

It has been observed nationally and in Texas that some physicians are embracing concierge or direct pay medicine, a practice style in which physicians contract directly with patients, often in lieu of accepting government insurance plans such as Medicare and Medicaid and private insurance. In the 2014 Physicians Foundation survey, physicians were asked about their current position on concierge medicine (see chart below):

What is Your Position on Concierge/Direct Pay Medicine?

	Texas	All
I now practice some form of concierge/direct pay medicine	9.3%	7.2%
I am planning to transition fully or in part to this model	18.0%	13.3%
I have no plans to transition to this model	72.7%	79.5%

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins. 2014*

The chart below indicates that a relatively high number of Texas physicians who now are practicing some form of concierge medicine or are planning to do so.

Physicians Now Practicing Concierge Medicine or Planning To By State

1	Wyoming	38.2%	26	Kentucky	19.4%
2	Nevada	30.5%	27	Maryland	19.3%
3	Louisiana	28.8%	28	Iowa	19.2%
4	Florida	28.5%	29	Indiana	19.1%
5	Texas	27.3%	30	South Dakota	19.0%
6	Georgia	26.8%	31	Connecticut	18.9%
7	Mississippi	25.8%	32	New Hampshire	18.5%
8	Alaska	23.7%	33	Arkansas	18.0%
9	Utah	23.7%	34	Hawaii	18.0%
10	California	23.3%	35	Illinois	17.4%
11	Colorado	23.3%	36	South Carolina	17.2%
12	Oklahoma	23.2%	37	Minnesota	16.9%
13	Rhode Island	22.3%	38	Pennsylvania	16.2%
14	Tennessee	22.3%	39	Missouri	15.4%
15	Virginia	22.3%	40	Massachusetts	15.1%
16	West Virginia	22.3%	41	Alabama	15.0%

19	Montana	21.6%	44	North Dakota	12.9%
20	North Carolina	21.1%	45	Idaho	12.7%
21	Kansas	20.9%	46	Oregon	11.0%
22	Michigan	20.6%	47	Wisconsin	10.9%
23	New Jersey	20.6%	48	Nebraska	9.4%
24	Ohio	20.5%	49	Delaware	9.2%
25	Arizona	19.4%	50	Vermont	4.2%

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins. 2014*

The benefits and drawbacks of concierge medicine are the subject of continuing debate, with physicians in favor of the model arguing that it allows physicians to provide more personalized and effective care. Those opposed point out that primary care physicians converting to the concierge model often limit their practices to 500 to 600 patients, subsequently dropping three to four times that many patients from their practices. These patients then must find new physicians and may have difficulty doing so.

As the numbers above indicate, the Texas service area may see a relatively high number of physicians embrace the concierge model, given the tradition of independent, private practice ownership in Texas, which is preserved in the concierge/direct pay style of practice. The concierge model also tends to proliferate in areas such as Dallas/Fort Worth, Austin, Houston, and San Antonio, which have a high

concentration of patients who are both employed and have disposable income to invest in a more personalized style of care.

The following chart tracks potential patients who may be compelled to find a new family physician depending on the number of physicians in Texas who convert to concierge practice in the future. It assumes 6,228 family physicians in Texas with an average patient panel of 3,000, for a total patient panel of 18,648,000. It further assumes that Texas physicians transitioning to the concierge model will drop an average of 2,500 of their current patients from their practices.

**Potential Number of Patients Requiring New Family Practice Physicians
In Response to Physician Adoption of the Concierge Model in Texas**

Total Family Physicians in Texas: 6,228
Average patient panel: 3,000 (if consistent with national averages)

Convert to Concierge	Number of Patients Drop	Number of Patients Requiring New Family Physician
5%	2,500	778,500
10%	2,500	1,557,000
15%	2,500	2,335,500
20%	2,500	3,114,000

These numbers are, of course, hypothetical, and the percent of Texas physicians who will eventually convert to concierge medicine is not known, nor is the average patient panel of each family physician in Texas. Nevertheless, it is clear that even if a modest number of Texas family physicians convert to concierge practice in coming years (considerably fewer than indicate they will do so in The Physicians Foundation survey), tens of thousands and perhaps hundreds of thousands of patients will need to find a new family physician.

Part-time and Non-Clinical Practice

Similar estimates could be made for physicians who indicated they will make other practice changes. For example, if 6.4% of Texas physicians choose to work part-time in the next one to three years, per The Physicians Foundation survey, it would equate to a loss of 1,500 physician FTEs. If 11% of Texas physicians obtain a non-clinical job in the next one to three years, per The Physicians Foundation Survey, it would equate to a loss of 5,164 physician FTEs from clinical roles.

Again, it is not known how many physicians will actually pursue these options, but it is clear that changing practice patterns will have a significant, inhibiting effect on total physician FTEs in Texas and nationally, as more doctors migrate away from traditional, full-time, clinical private practice and toward part-time, non-clinical, concierge and other emerging practice models.

Changing Physician Work Schedules

Reduction in Texas physician FTE counts also may be driven by changing physician work schedules. With the advent of physician employment and younger physicians valuing a controllable lifestyle, physician productivity can be expected to decline. The survey Merritt Hawkins conducted for The

Physicians Foundation referenced above illustrates that hours worked and patients seen by physicians have decreased in the last six years.

Average Hours Worked by Physicians per Week

<u>Year</u>	<u>Hours</u>
2008	56.93
2012	52.93
2014	52.83

Decline of 5.9%/2008-2014

Average Patients Seen per Day

<u>Year</u>	<u>Patients</u>
2008	23.43
2012	20.10
2014	19.5

Decline of 16.8%/2008-2014

Source: A Survey of America's Physicians: The Physicians Foundation/Merritt Hawkins. 2014

Assuming another 5.9% drop in average hours worked per week by physicians over the next six years, Texas' current 46,953 physicians will represent only 43,823 FTEs in 2021, a loss of 2,770 FTEs by today's standards. Assuming a smaller, 3% drop in average hours worked over the next six years equates to a loss of 1,385 FTEs by 2021.

Assuming another 16.8% drop in average number of patients seen per day over the next six years for Texas' 6,228 family physicians equates to a reduction of 3,132,864 patients seen per year by 2021. Assuming a smaller, 8.4% reduction in patients seen by family physicians over the next six years equates to 1,566,432 fewer patients seen.

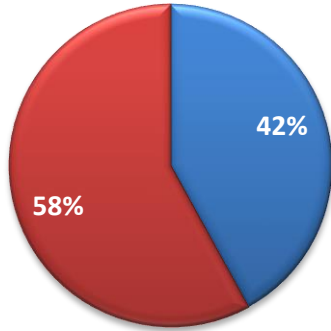

Again, the exact percent of reduction in physician productivity cannot be predicted, but given that the trend toward employment and away from private practice still is accelerating, some drop can be predicted, and this will have a measurable effect on physician FTEs and patient access to physician services in Texas.

IMPACT OF PHYSICIAN AGE

In the next ten years, an aging physician population will have a profound impact on the physician workforce. Over 42% of all physicians in active patient care in the United States are 55 years old or older. In ten years, many of these physicians will be retired, and for the first time in the modern era of medicine there will likely be fewer physicians entering the workforce each year than exiting it.

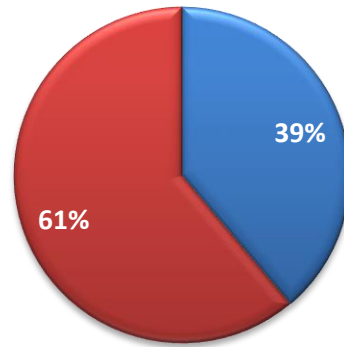

Data show that while the physician workforce in Texas will be significantly affected by physician aging, the impact could be relatively mitigated as Texas physicians are comparatively youthful compared to national averages (see charts below).

Source: SK&A, 2014

As these numbers indicate, only 39% of physicians in Texas are 55 years old and older, compared to 42% nationally, and 24% are 60 and older, compared to 28% nationally.

Nevertheless, 39% of the total represents 18,311 physicians in Texas who are 55 or older, many of whom are likely to retire sometime in the next ten years.

As stated above, physician practice patterns also must be taken into consideration. As noted in The Physicians Foundation survey, 45.4% of Texas physicians said they would accelerate their retirement plans given the changes taking place in medicine, compared to 38.6% of all physicians (see chart on following page).

Physicians Planning to Accelerate Their Retirement Plans by State

1	Montana	62.2%	26	Maine	38.7%

PHYSICIAN MORALE IN TEXAS

The high rate of intended retirement among Texas physicians is in part a function of their professional morale, which is low compared to physicians in other states. The chart below indicates that morale among Texas physicians is lower than that of doctors in almost every other state.

Physician Morale by State/ Percent Who Rate Morale as Positive

1	North Dakota	58.1%	26	New York	44.3%
2	Minnesota	54.8%	27	Illinois	44.1%
3	Rhode Island	52.9%	28	Wyoming	44.1%
4	Virginia	52.9%	29	Pennsylvania	44.0%
5	West Virginia	52.9%	30	Alabama	43.9%
6	Maryland	51.3%	31	Michigan	43.6%
7	Massachusetts	51.0%	32	Oregon	43.0%
8	Wisconsin	50.4%	33	Tennessee	43.0%
9	Iowa	49.7%	34	South Dakota	42.8%
10	Idaho	49.2%	35	Ohio	42.7%
11	Utah	48.5%	36	New Hampshire	42.6%
12	California	48.0%	37	Colorado	42.3%
13	Kansas	48.0%	38	New Jersey	42.3%
14	Vermont	47.9%	39	New Mexico	41.3%
15	Kentucky	47.7%	40	Connecticut	41.1%
16	Nebraska	47.5%	41	Georgia	41.1%
17	Alaska	47.4%	42	Florida	40.9%
18	Oklahoma	46.1%	43	Arizona	39.8%

19	South Carolina	45.8%	44	Mississippi	39.8%
20	Washington	45.7%	45	North Carolina	38.8%
21	Delaware	45.3%	46	Texas	36.3%
22	Indiana	44.9%	47	Louisiana	35.7%
23	Missouri	44.9%	48	Nevada	32.8%
24	Hawaii	44.8%	49	Arkansas	32.4%
25	Maine	44.5%	50	Montana	29.4%

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins. 2014*

One explanation for this is that many Texas doctors remain in private practice, and it is private practice physicians who feel the most alienated from today's medical practice environment. Rising costs, declining reimbursement, increased paperwork, additional regulatory oversight, and the stresses of running a business fall harder on independent doctors than they do on employed physicians. The chart below indicates the connection between private, independent practice and low physician morale.

Physician Morale by Practice Status

	Very/Somewhat Positive	Very/Somewhat Negative
Employed	50.5%	49.5%
Private/Independent	33.1%	66.9%

Physicians with low professional morale are more likely to make changes in their practices than are those with high morale, including retirement, working part-time, reducing number of patients seen, and transitioning to concierge medicine. It therefore can be expected that a significant number of Texas physicians, whose morale is comparatively low, will seek and embrace alternate practice styles, reducing net physician FTEs.

Employment and Productivity

It is likely that the corporate practice of medicine law in Texas, which limits the number of entities that can employ physicians, has contributed to the high number of Texas physicians who have remained independent. However, the parameters of the law have broadened recently, allowing Texas physicians to have more latitude to seek employment with hospitals, and to also be employed by medical groups and other physician owned entities. As more Texas physicians become employed, overall physician productivity can be expected to decrease. According to The Physicians Foundation's *2014 Survey of America's Physicians*, independent, private practice physicians see 8.5% more patients per day than do employed physicians.

THE IMPACT OF GENDER

Approximately one-third (33%) of physicians in the United States are female, up from just 12% in 1981, according to Medical Marketing Systems (MMS). The number of female physicians has increased by 400% since 1981, while male physician ranks have increased by only 52%. The overall physician population has increased 35% since 1981.

Following is a breakout of the percent of physicians who are female nationally and in Texas.

Percent of Physicians Who Are Female

United States	33%
Texas	31%
Rank	26 th

Source: American Medical Association Physician Master File

Females compose a slightly smaller percentage of the workforce compared to the national physician workforce, ranking 26th among states in this regard. However, the number of female physicians in Texas is growing rapidly, as it is nationwide. The number of female Texas physicians almost doubled in the last ten years, growing from 8,626 in 2003 to 16,804 in 2013, a 94.8% growth rate. (*Report of Committee on Physician Distribution and Healthcare Access, Texas Medical Association*). The number of female physicians in Texas grew three times faster than the number of male physicians in that time frame.

Growth in the number of female physicians represents social progress, but also has significant workforce implications. Female physicians work approximately 8% fewer hours than do male physicians, according to The Physicians Foundation's *2014 Survey of America's Physicians*, and see 13.3% fewer patients per day (see charts below). As the number of female doctors grows, both nationally and in Texas, overall physician productivity and FTE count can be expected to decline.

Hours Worked Per Week Male and Female Physicians

Male	Female
54.12	50.28

Patients Seen Per Day/Male and Female Physicians

Male	Female
20.5	18.1

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins*

Over half of students entering medical school today are female, and if current trends persist, half of physicians will be female, leading to a loss of thousands of physician FTEs. If today half of Texas' 46,953 physicians were female, rather than 31%, some 713 FTEs would be lost, given an 8% reduction in productivity.

TEAM-BASED MODELS, PAs AND NPs

Healthcare is embracing a team-based delivery model in which patient care duties will be more appropriately distributed to a wider range of health professionals, including advanced practitioners such as physician assistants (PAs) and nurse practitioners (NPs). In the medical home model, primary care physicians will be the "quarterbacks" of the team, ensuring work is allocated appropriately among PAs, NPs, pharmacists, nurses, therapists, case managers, specialty physicians and others. Through more

appropriate work allocation, and with each provider practicing to the top of his or her training, some practice efficiencies may be gained and physician time and access increased.

There currently are 190,802 NPs in the U.S., or 60 per 100,000 population. There are 11,074 NPs in Texas, or 42 per 100,000 population, less than the national average. There are 104,337 PAs in the U.S., or 33 per 100,000, while there are 6,898 in Texas, or 26 per 100,000. Texas has fewer advanced practitioners than the national average and will need to train and attract more to supplement (though not to replace) the physician workforce.

EMPLOYMENT, CONSOLIDATION AND AFFILIATIONS

For a variety of reasons, a growing number of physicians are seeking employment by hospitals. Hospital employment may be seen by physicians as a safe harbor from increasing government and third party payer compliance issues, escalating costs, flat or declining reimbursement, electronic health record (EHR) implementation, and other challenges physicians face in today's evolving healthcare market.

The changing nature of the physician search assignments that Merritt Hawkins conducts nationally reflects this trend. In 2004, 11% of Merritt Hawkins' search assignments featured settings in which the recruited physician was to be employed by a hospital. By 2014, that number grew to 64% (see chart below).

Merritt Hawkins Search Assignments Featuring Hospital Employment of Physicians

2004	11%
2005	19%
2006	23%
2007	43%
2008	45%
2009	45%
2010	51%
2011	56%
2012	63%
2013	64%
2014	64%

Source: Merritt Hawkins 2014 Review of Physician and Advanced Practitioner Recruiting Trends

A growing number of other entities in addition to hospitals also are employing physicians, including large medical groups, urgent care centers, health insurance companies, retail clinics, FQHCs, surgery centers and others. According to Merritt Hawkins' data, over 90% of newly hired physicians in 2014 were employed by a hospital, medical group or other entity, while fewer than 10% were recruited into a private practice (*Merritt Hawkins 2014 Review of Physician and Advanced Practitioner Recruiting Incentives*). A list of hospitals in Texas that are potential physician employers, showing in some cases the number of physicians on staff, is included in Appendix C of this report.

A study of physician practice arrangements released by the American Medical Association in September, 2013, showed that a slight majority of physicians (53.2%) remain in self-employed, private practices (see chart below).

Selected Findings of AMA 2013 Practice Arrangement Study

Self-employed physicians, U.S	53.2%
Self-employed physicians (under 40)	43.0%
Self-employed (family practice)	39.8%
Self-employed (internal medicine)	46.0%
Self-employed (surgical subspecialties)	71.9%
Self-employed (internal medicine subspecialties)	61.5%
Self-employed, 1988	72.1%
Self-employed, 2001	61.0%
Self-employed, 2008	56.3%
Working in practices wholly owned by physicians	60.0%
Working for practice wholly or partially owned by a hospital	29.0%
Physicians in solo practice	18% (24% in 2007)
Physicians in single-specialty practice	45.5%

Source: Policy Research Perspectives: New Data on Physician Practice Arrangements: Private Practice Remains Strong Despite Shifts Toward Hospital Employment. American Medical Association. September, 2013

However, these numbers reflect 2012 data. The Physicians Foundation’s 2014 Survey of America’s Physicians, based on 2014 data, shows a lower number of physicians now in private practice (see chart below) and may be more indicative of a market rapidly evolving toward the employed physician model.

Practice Status of U.S. Physicians

Employed by a hospital	30.5%
Employed by a medical group	22.4%
Practice owner/Partner/Associate	34.6%
Other	12.5%

Source: A Survey of America’s Physicians. The Physicians Foundation/Merritt Hawkins. 2014

These data suggest that only about 35% of physicians remain in self-employed status nationwide, while the remainder are either employees or in other practice status that may be considered “quasi-employed” or “quasi-independent,” depending on one’s perspective.

As a sign of the future, a greater number of younger physicians indicate they are employed than do older physicians (see chart below):

Practice Status of Physicians by Age

	<u>45 or younger</u>	<u>46 or older</u>
Employed by a hospital or group	65.7%	25.7%

Source: *A Survey of America's Physicians. The Physicians Foundation/Merritt Hawkins. 2014*

It is widely perceived that younger physicians are less inclined to be interested in private practice than are older physicians, as they put a greater premium on personal time and lifestyle considerations. In Merritt Hawkins' *2015 Survey of Final-Year Medical Years*, 76% of physicians completing their training in 2014 indicated they would prefer employment by a hospital, medical group or other entity to an employed setting in their first practice.

As referenced above, Texas remains one of the last bastions of independent practice, but even in Texas, with its corporate practice of medicine law, less than 50% of physicians are independent (see chart below).

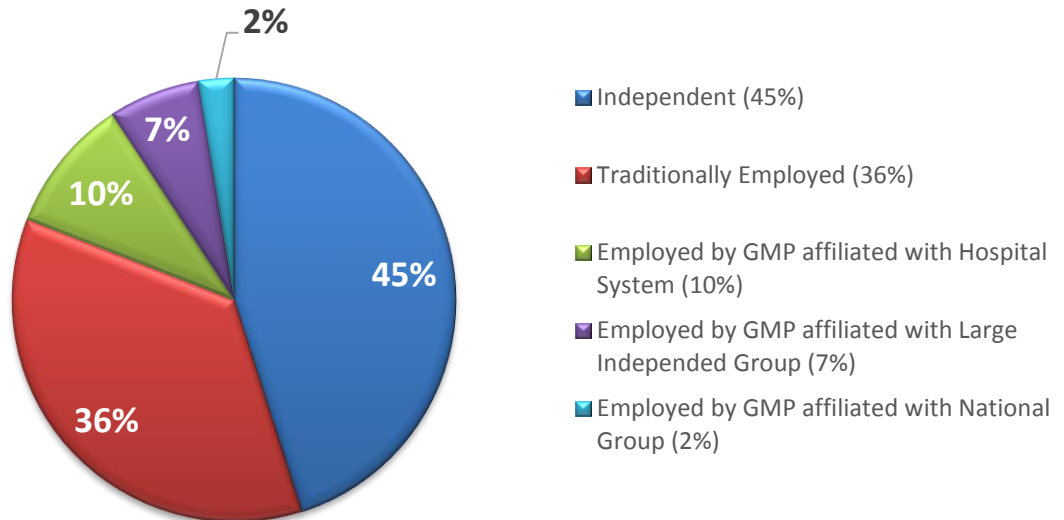

Independent Physicians by State

1	Louisiana	52.0%	26	New York	33.2%
2	Texas	48.6%	27	Rhode Island	32.9%
3	New Jersey	44.6%	28	Virginia	32.9%

Source: Definitive Healthcare Database, 2014

As the healthcare system evolves, physician relationships with various entities are likely to become more complex, as are the relationships with other often “free-standing” businesses. Just as it may be difficult to know what corporation owns or is affiliated with a restaurant, it will become more difficult for consumers to trace the ownership or affiliation status of the physicians they see. Some physicians with offices on hospital campuses may be independent, while some in traditional corner offices may be hospital employed.

Texas reflects this trend, with recent noted consolidation activity including the landmark merger between the Baylor hospital system and the physician-owned Scott & White clinics. The 2013 merger created a sprawling health system composed of 43 hospitals, 500 patient care sites of service, and over 6,000 affiliated physicians. Similarly, in 2011, Texas Health Resources, a North Texas based system composed of 25 hospitals, acquired Medical Edge Healthcare Group, a medical group composed of some 420 physicians, physician assistants and nurse practitioners with 250 patient access points.

Other physician groups in Texas have grown through consolidation. An example is USMD (formerly, Medical Clinic of North Texas), which in 2000 was composed of 56 physicians in four specialties, but due largely to consolidation grew to 130 physicians in nine specialties by 2009. USMD now has 211 physicians in 16 specialties after merging with Urology Associates of North Texas.

These evolving relationships are being given impetus in part by the growing limits the Texas legislature is placing on the statewide ban on the practice of corporate medicine, which prohibits hospitals from employing physicians. In 2011, then Governor Rick Perry signed into law a bill that expands those hospitals that qualify for an exception to the ban. The law allows critical access hospitals, sole community hospitals, and hospitals in counties with populations of 50,000 or less (nearly 200 of the

state's 254 counties) to employ physicians. The legislature made similar concessions in the past for private nonprofit medical schools, school districts, some non-profit health organizations and certain hospital districts. It is generally believed that an end to the ban is probable somewhere in the future.

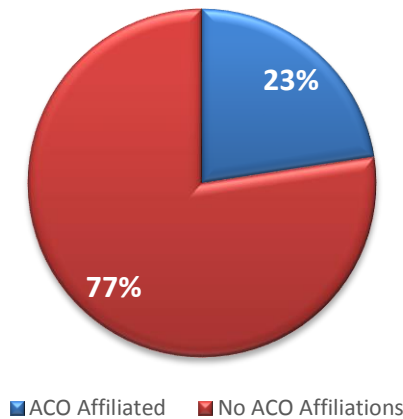

POPULATION MANAGEMENT AND ACCOUNTABLE CARE ORGANIZATIONS (ACOs)

The ACA, combined with market forces that are driving health insurance costs for companies and individuals to unsustainable levels, is driving much of this consolidation and integration. It is believed by many policy analysts and healthcare professionals that integrated health systems composed of hospitals, doctors, management teams, and robust information technology resources offer the best model to control costs and ensure quality.

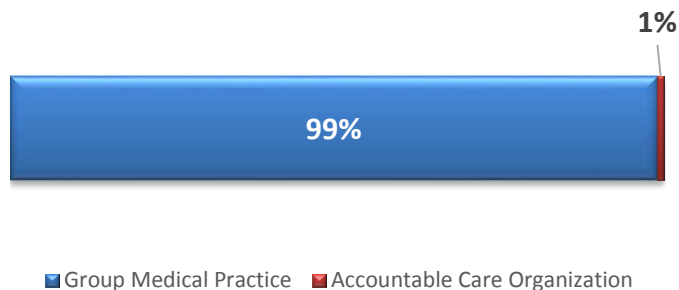

The ACA encourages the formation of Accountable Care Organizations (ACOs) that implement this model, are designed to manage the health of large populations, and are financially rewarded for cost effectiveness and for achieving positive health outcomes for patients.

An increasing number of physicians nationally and in Texas are affiliated with an ACO (see charts below):

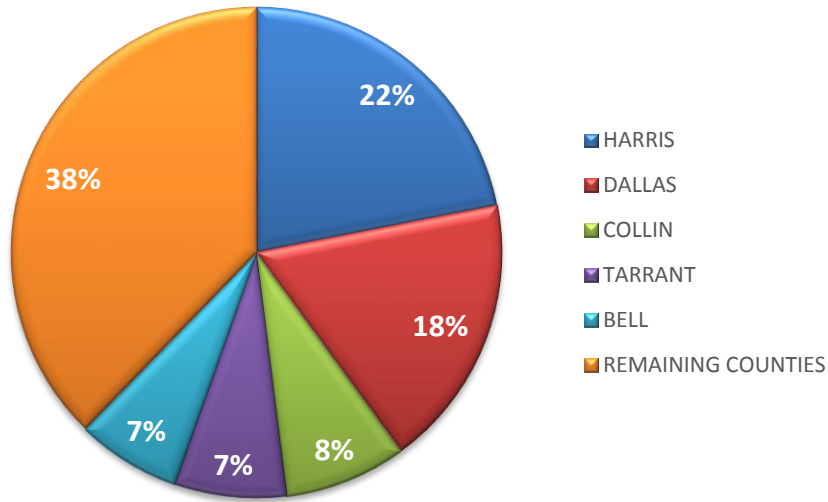

Texas Physicians Affiliated with ACOs

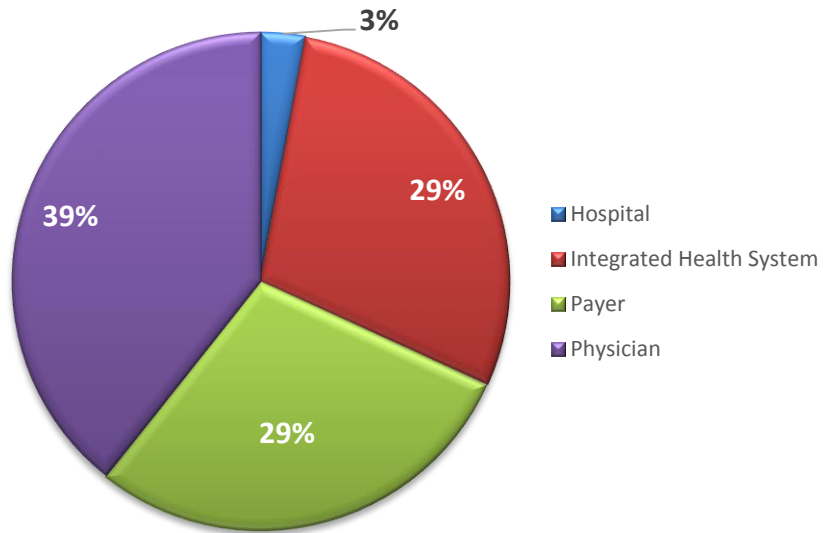

Health Record Type

Top ACO Affiliated by Counties

ACO Initiated By:

Source: SK&A, 2014

While SK&A indicates 23% of Texas physicians are affiliated with ACOs, The Physicians Foundation’s 2014 Survey of America’s Physicians indicates a slightly lower number and suggests Texas ranks 39th out of 50 states in physician ACO participation (see chart below):

Physicians Participating in ACOs by State

1	Vermont	56.3%	26	North Dakota	25.8%
2	Wisconsin	47.8%	27	Arkansas	24.8%

Currently, CMS indicates there are 337 Medicare designated ACOs nationwide. As of May 2014, Leavitt Partners is actively tracking 626 ACOs of all kinds (Medicare and non-Medicare) across the United States. Of these 626 ACOs, 329 have government contracts, 210 have commercial contracts and 74 have both government and commercial contracts. The remaining 13 ACOs have not made specific announcements about the nature of their accountable care contracts or are in the process of finalizing contracts that are not yet active.

Source: *Petersen, M., Gardner, P., Tu, T., & Muhlestein, D. (2014, June 1). Growth and Dispersion of Accountable Care Organizations: June 2014 Update.*

In Texas, there are 49 ACOs (see list below), which cover about 5-10% of Texas' population, with higher penetration in urban areas of the state. Many counties have no ACOs, while some counties have multiple ACOs (see graphics below).

It is difficult to determine how many Texas physicians are affiliated with each ACO on the above list. However, as the data above show, the total is between 19.5% (9,155 physicians) and 23% (10,799 physicians). The ultimate success of this model, and whether or not these ACOs will prosper or survive, is still an open question. However, reimbursement systems for both hospitals and physicians, led by CMS, clearly are moving away from volume based models and toward value-based models. On January 27, 2015 federal officials announced an accelerated effort to shift payment from volume to value based metrics. The goal is to grow value-based Medicare payment to 50% by the end of 2018, a move likely to promote physician/hospital affiliation and the employment of physicians in Texas and nationally. Some form of organization such as ACOs, which can manage the health of large populations within a fixed budget, are likely to be prevalent in the future, and a significant number of physicians will be affiliated with them.

MEANINGFUL USE

The ACA has encouraged the adoption of electronic health records (EHR) by physicians in order to improve quality, increase efficiency, and promote care integration. Funds have been provided by the federal government for physicians who adopt EHR and follow Meaningful Use guidelines.

The chart below shows the number of physicians in Texas and others states who have implemented EHR in their practices:

Physicians Who Have Implemented EHR by State					
1	Wisconsin	95.4%	26	Tennessee	87.4%

2	North Dakota	95.2%	27	Kansas	87.3%
3	South Dakota	95.2%	28	Utah	87.1%
4	Minnesota	95.1%	29	California	86.7%
5	Wyoming	93.7%	30	Michigan	86.5%

Though the majority of Texas physicians have implemented EHR, Texas has a low rate of physician EHR implementation relative to other states.

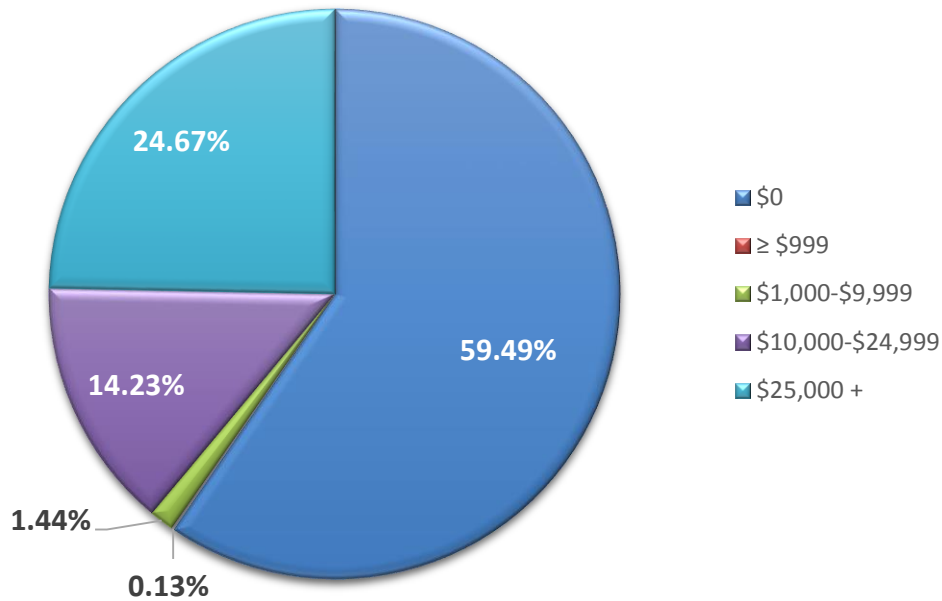

Stage 1 Meaningful Use Payments Received in Texas:

This information was available for a smaller population of the total 39,237 physicians listed in the Excel spreadsheet attached to this report. Only 30,891 were reviewed in this section.

Payment amount per physician accumulated from 2011-2014 for Stage 1 Meaningful Use requirements met (Medicare Only):

	OVERALL	PRIMARY CARE	SPECIALIST
PHYSICIAN COUNT:	12,513	3,830	8,683
TOTAL AMOUNT:	\$314,549,096.58	\$97,016,199.25	\$217,532,897.33
AVERAGE:	\$25,137.78	\$25,330.60	\$25,052.73
HIGH:	\$41,760.00	\$41,760.00	\$41,760.00
LOW:	\$2.00	\$2.00	\$23.66

Percentage of Meaningful Use Payments Given

Source: Definitive Healthcare, 2014

General Information:

- More than \$17.2 billion in Medicare EHR Incentive Program payments have been made between May 2011 and November 2014.
- More than \$8.7 billion in Medicaid EHR Incentive Program payments have been made between January 2011 (when the first set of states launched their programs) and November 2014.

State	Program Type	Provider Type	Count	Amount	Average/Provider
Texas	Medicare	EP	30,190	\$406,134,926.22	\$13,452.63

Source: Centers for Medicare & Medicaid Services, cms.gov, May 2014

It is to be hoped that EHR will increase physician productivity and allow more time for patient care, thereby enhancing some of the physician FTEs lost to changing physician work patterns and choices enumerated above.

CONCLUSION

Physician distribution, accessibility, demographic trends, practice patterns, and practice affiliations in Texas are distinguished by several prevailing characteristics. Texas has fewer physicians per capita than the national average, and is experiencing acute physician shortages in many of its counties. Shortages are centered in rural areas, but are not confined to them. They are present in both primary care and in a number of key medical specialties. While Texas is adding and retaining from graduate medical education a large number of physicians, this number is insufficient to address physician access limitations in the state, and considerably more doctors will need to be trained in Texas and attracted to it from other areas to ensure reasonable access to services.

In addition, the aging physician population, the rapid increase in female physicians, and the prevailing practice patterns of Texas physicians are likely to significantly reduce overall physician FTEs. In particular, Texas physicians participate in Medicaid, Medicare and state insurance exchanges in relatively low numbers, and patients insured through these programs are likely to have difficulty accessing doctors. Texas physicians also plan to make changes in their practices, such as retirement, working part-time, seeking non-clinical jobs, or transitioning to concierge medicine – all choices that will further reduce physician FTEs.

Though Texas is second in the nation in physicians who remain in private practice, the practice status of Texas physicians is rapidly evolving. Fewer than 50% of Texas physicians remain in private practice and a growing number are employed by or affiliated with large health systems and/or Accountable Care Organizations. Though it may lead to cost efficiency and quality gains, this trend is likely to further erode physician productivity and overall physician FTEs. Though the majority of Texas physicians have implemented EHR, Texas physicians trail those in most other states in EHR implementation. Physician productivity in Texas may eventually be enhanced, and some FTEs gained, through EHR implementation.
