

Summary – Information and Quality Services Center - 2018

Why is the information Unique?

1. All-payer, all-encounter claims information from 98% of North Texas hospitals
2. All elements of all claims are available – not just portions
3. Provide cutting edge business analysis tool through MyIQ Analytics
4. Can be compared to all-Texas claims data from hospitals using developed business intelligence tools
5. Data is un-blinded as to hospital and physician for all encounters
6. Information can be utilized for geographic analysis
7. Data can generate complete performance data for all encounters – not just a single payer
8. Information is available within 75 days of close of month
9. Regional Master Patient Index availability for 11.5 million patients and 60 million encounters in North Texas to evaluate population trends in health, ER visits, Readmissions and complete hospital encounter information for individual patients across all North Texas hospitals
10. All integrated with 3M grouper software to determine CMS-DRG, APR-DRG, APC, EAPG, PPR and PPC.

How Can Health Systems and the Community Use this Information Strategically?

1. General Uses
 - a. Quality/Safety
 - b. Market Demographics and Patient Migration
 - c. Community and Population Health Management
2. Specific Uses
 - a. 1115 Waiver Information and Reporting
 - b. Community Health Needs Assessment and Project Support
 - c. ACO Alignment Information (for ACO patients)
 - d. Market segment assessment – by physician and geography
 - e. Physician Credentialing
 - f. Evaluation of performance against market competitors
 - g. Managed care contracting
 - h. Measurement of SNF quality performance for contracting purposes
 - i. Physician Leakage
 - j. Research Support
3. Unique Projects – Texas Quality Initiative, Grants/Research, Readmission Whitepapers, ER “Frequent Flyer” White papers, Regional Data Center (US Census and National Science Foundation), Support of HIIN projects and metrics, Population Health Zip Code Analysis
